About the area

Location and boundaries

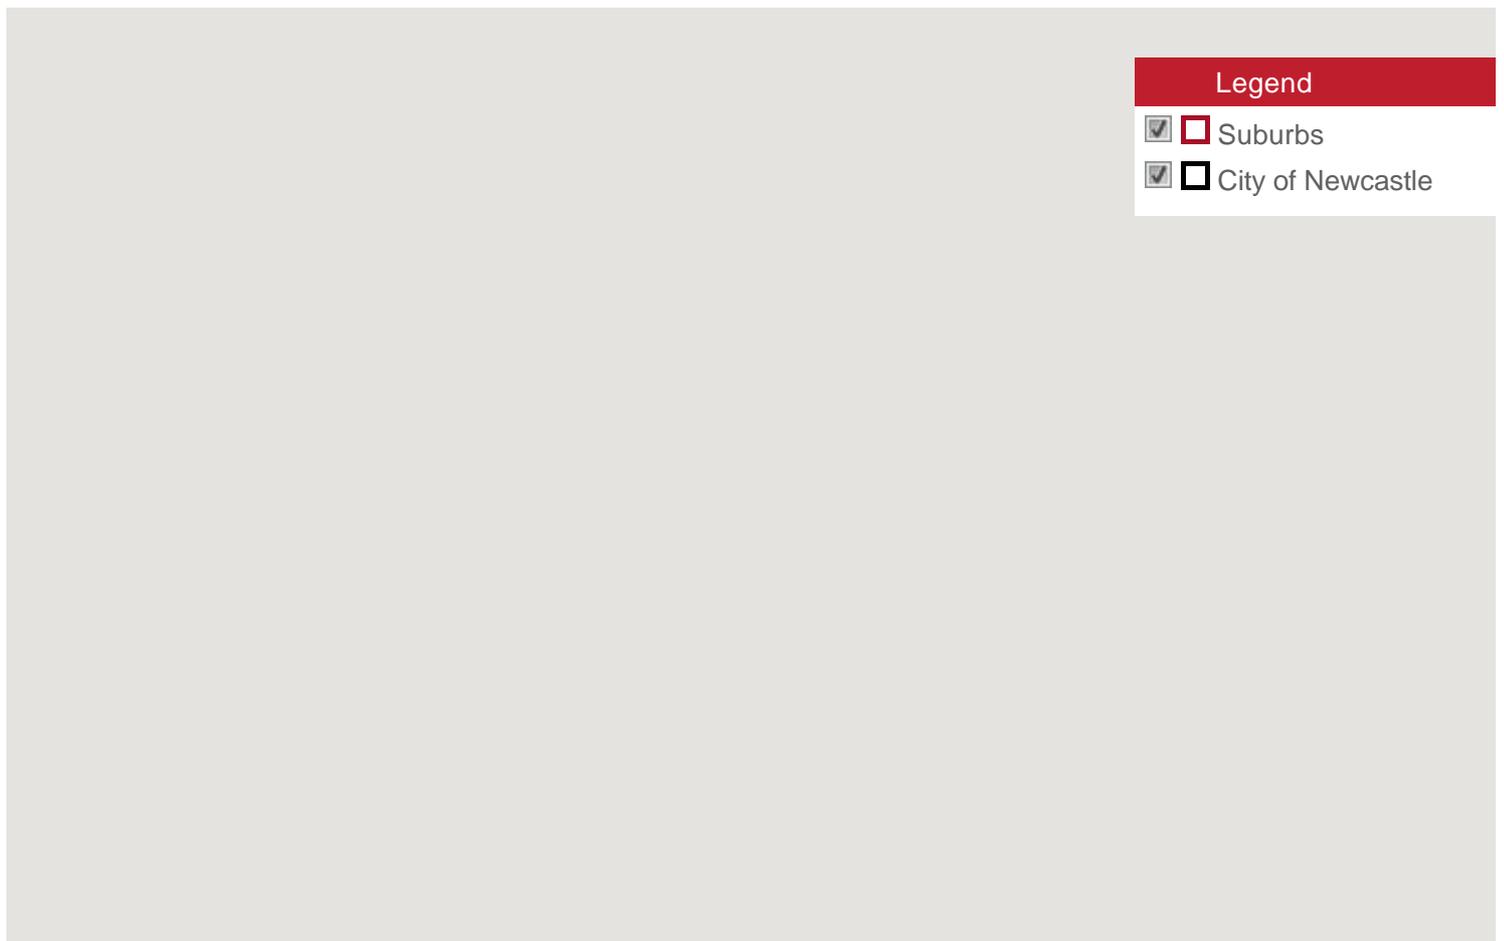

Rankin Park is bounded by Kirton Avenue, Cambridge Drive and the locality of Elermore Vale in the north, the locality of New Lambton Heights in the east, McCaffrey Road and Lake Macquarie City in the south, and Grandview Road in the west.

Name origin

Rankin Park is named after Mr A A Rankin, a prominent Newcastle solicitor.

Rankin Park

Settlement history

Settlement of the area dates from the mid 1800s, although population was minimal until the late 1800s. Significant development occurred from the post-war years. The population gradually declined from the early 1990s, a result of little change in dwelling stock and a decline in the average number of persons living in each dwelling.

Land use

Rankin Park is an established residential and parkland area.

Major features

Major features of the area include George McGregor Park and Murabambah Park.

Included areas

Part of the suburb of Rankin Park is located in Lake Macquarie City.

Population, households and dwellings

The Census provides us with a count of the total population in the City of Newcastle in 2011 as well as several sub-populations such as the Indigenous population, voter population and the overseas born. It also enables us to see how these have changed over each five year period back to 1991. It is important to note that there are different ways of counting populations. You can access two population counts on this page – the Usual Residence count and the Enumerated Count – by changing your Data Type selection in the control bar above the table. For post 2011 population go to [Population Estimates](#) and to read about which population to use when, go to [Population Types](#).

Population

Service age groups

The Age Structure of Rankin Park provides key insights into the level of demand for age based services and facilities such as child care. It is an indicator of Rankin Park's residential role and function and how it is likely to change in the future.

Service age groups divide the population into age categories that reflect typical life-stages. They indicate the level of demand for services that target people at different stages in life and how that demand is changing.

To get a more complete picture Rankin Park's Age Structure should be viewed in conjunction with [Household Types](#) and [Dwelling Types](#).

Age structure - service age groups

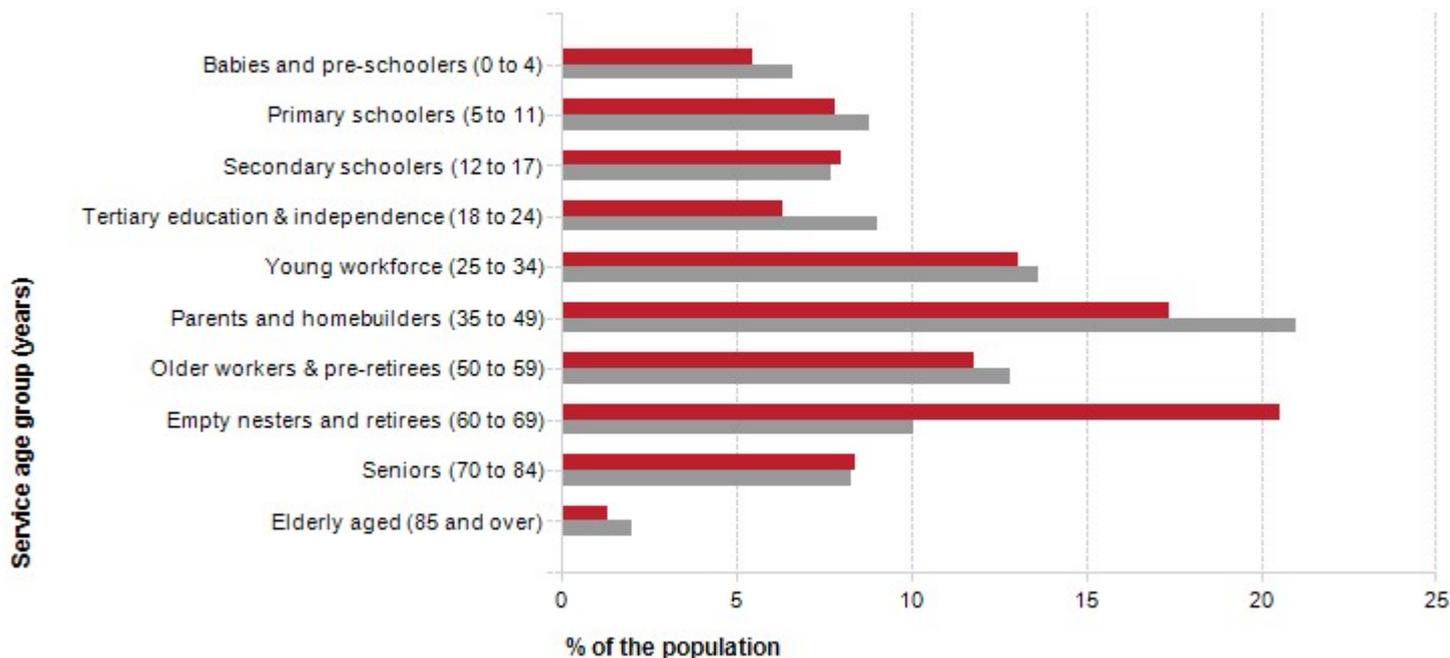

Rankin Park	2011			2006			Change
Service age group (years)	Number	%	New South Wales %	Number	%	New South Wales %	2006 to 2011
Babies and pre-schoolers (0 to 4)	73	5.5	6.6	93	6.8	6.4	-20
Primary schoolers (5 to 11)	104	7.8	8.8	146	10.6	9.3	-42
Secondary schoolers (12 to 17)	106	8.0	7.7	78	5.7	8.2	+28
Tertiary education & independence (18 to 24)	84	6.3	9.0	112	8.2	9.2	-28
Young workforce (25 to 34)	174	13.1	13.6	209	15.2	13.6	-35
Parents and homebuilders (35 to 49)	231	17.4	21.0	235	17.1	21.9	-3

Change in age structure, 2006 to 2011

Rankin Park

Source: Australian Bureau of Statistics, Census of Population and Housing, 2006 and 2011 (Usual residence data)
Compiled and presented in profile.id by .id, the population experts.

Dominant groups

Analysis of the service age groups of Rankin Park in 2011 compared to New South Wales shows that there was a lower proportion of people in the younger age groups (0 to 17 years) and a higher proportion of people in the older age groups (60+ years).

Overall, 21.3% of the population was aged between 0 and 17, and 30.2% were aged 60 years and over, compared with 23.1% and 20.4% respectively for New South Wales.

The major differences between the age structure of Rankin Park and New South Wales were:

- A *larger* percentage of 'Empty nesters and retirees' (20.5% compared to 10.0%)
- A *smaller* percentage of 'Parents and homebuilders' (17.4% compared to 21.0%)
- A *smaller* percentage of 'Tertiary education & independence' (6.3% compared to 9.0%)
- A *smaller* percentage of 'Babies and pre-schoolers' (5.5% compared to 6.6%)

Emerging groups

From 2006 to 2011, Rankin Park's population decreased by 39 people (2.8%). This represents an average annual population change of -0.57% per year over the period.

The largest changes in age structure in this area between 2006 and 2011 were in the age groups:

- Older workers & pre-retirees (50 to 59) (-83 persons)
- Empty nesters and retirees (60 to 69) (+79 persons)
- Seniors (70 to 84) (+63 persons)

Five year age groups

The Age Structure of Rankin Park provides key insights into the level of demand for age based services and facilities such as child care. It is also an indicator of Rankin Park's residential role and function and how it is likely to change in the future.

Five year age groups present a classic age profile of the population. Each age group covers exactly five years, which enables direct comparison between each group.

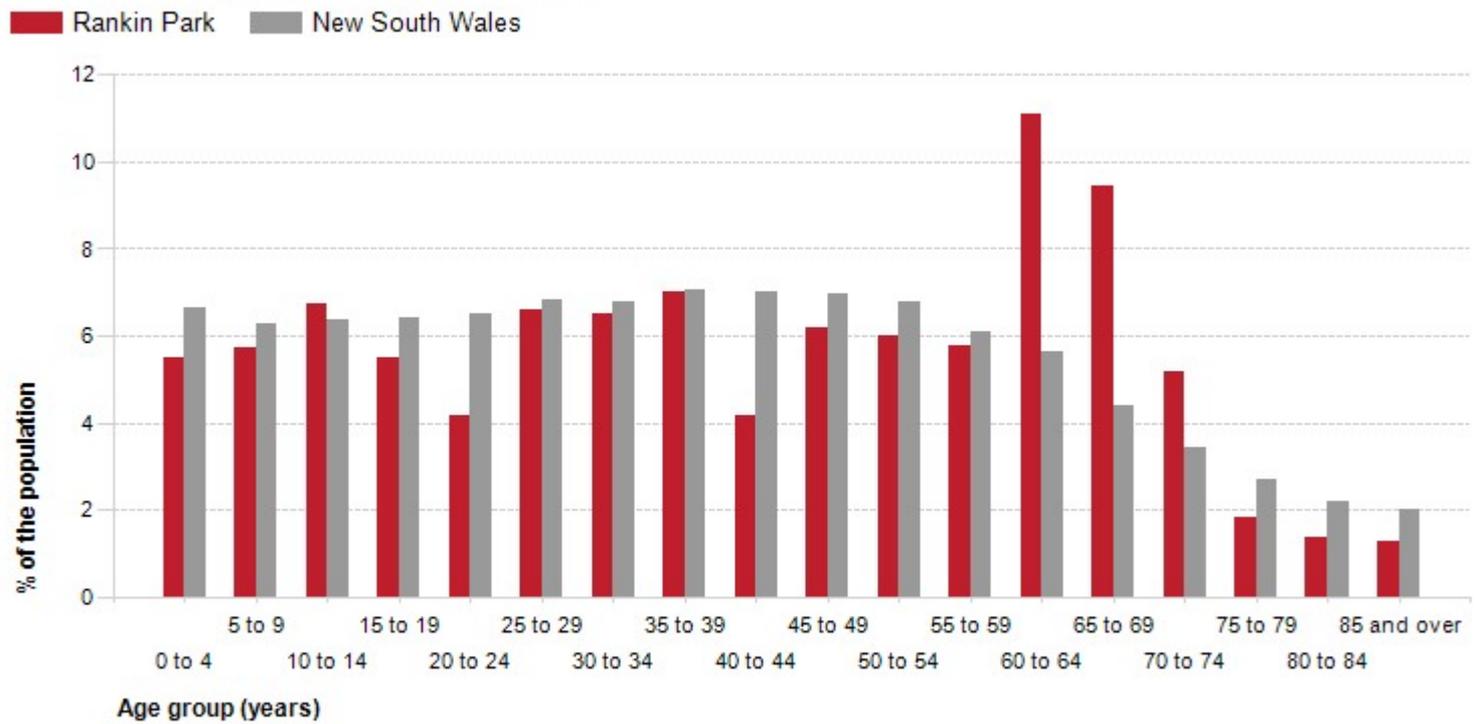

To get a more complete picture Rankin Park's Age Structure should be viewed in conjunction with [Household Types](#) and [Dwelling Types](#).

Age structure - Five year age groups

Rankin Park	2011			2006			Change
Five year age groups (years)	Number	%	New South Wales	Number	%	New South Wales	2006 to 2011

Change in five year age structure, 2006 to 2011

Rankin Park

Source: Australian Bureau of Statistics, Census of Population and Housing, 2006 and 2011 (Usual residence data)
Compiled and presented in profile.id by .id, the population experts.

Dominant groups

Analysis of the five year age groups of Rankin Park in 2011 compared to New South Wales shows that there was a lower proportion of people in the younger age groups (under 15) and a higher proportion of people in the older age groups (65+).

Overall, 17.9% of the population was aged between 0 and 15, and 19.1% were aged 65 years and over, compared with 19.3% and 14.7% respectively for New South Wales.

The major differences between the age structure of Rankin Park and New South Wales were:

- A *larger* percentage of persons aged 60 to 64 (11.1% compared to 5.6%)
- A *larger* percentage of persons aged 65 to 69 (9.5% compared to 4.4%)
- A *larger* percentage of persons aged 70 to 74 (5.2% compared to 3.4%)
- A *smaller* percentage of persons aged 40 to 44 (4.2% compared to 7.0%)

Emerging groups

From 2006 to 2011, Rankin Park's population decreased by 39 people (2.8%). This represents an average annual population change of -0.57% per year over the period.

The largest changes in age structure in this area between 2006 and 2011 were in the age groups:

- 55 to 59 (-81 persons)
- 65 to 69 (+63 persons)

Single year of age

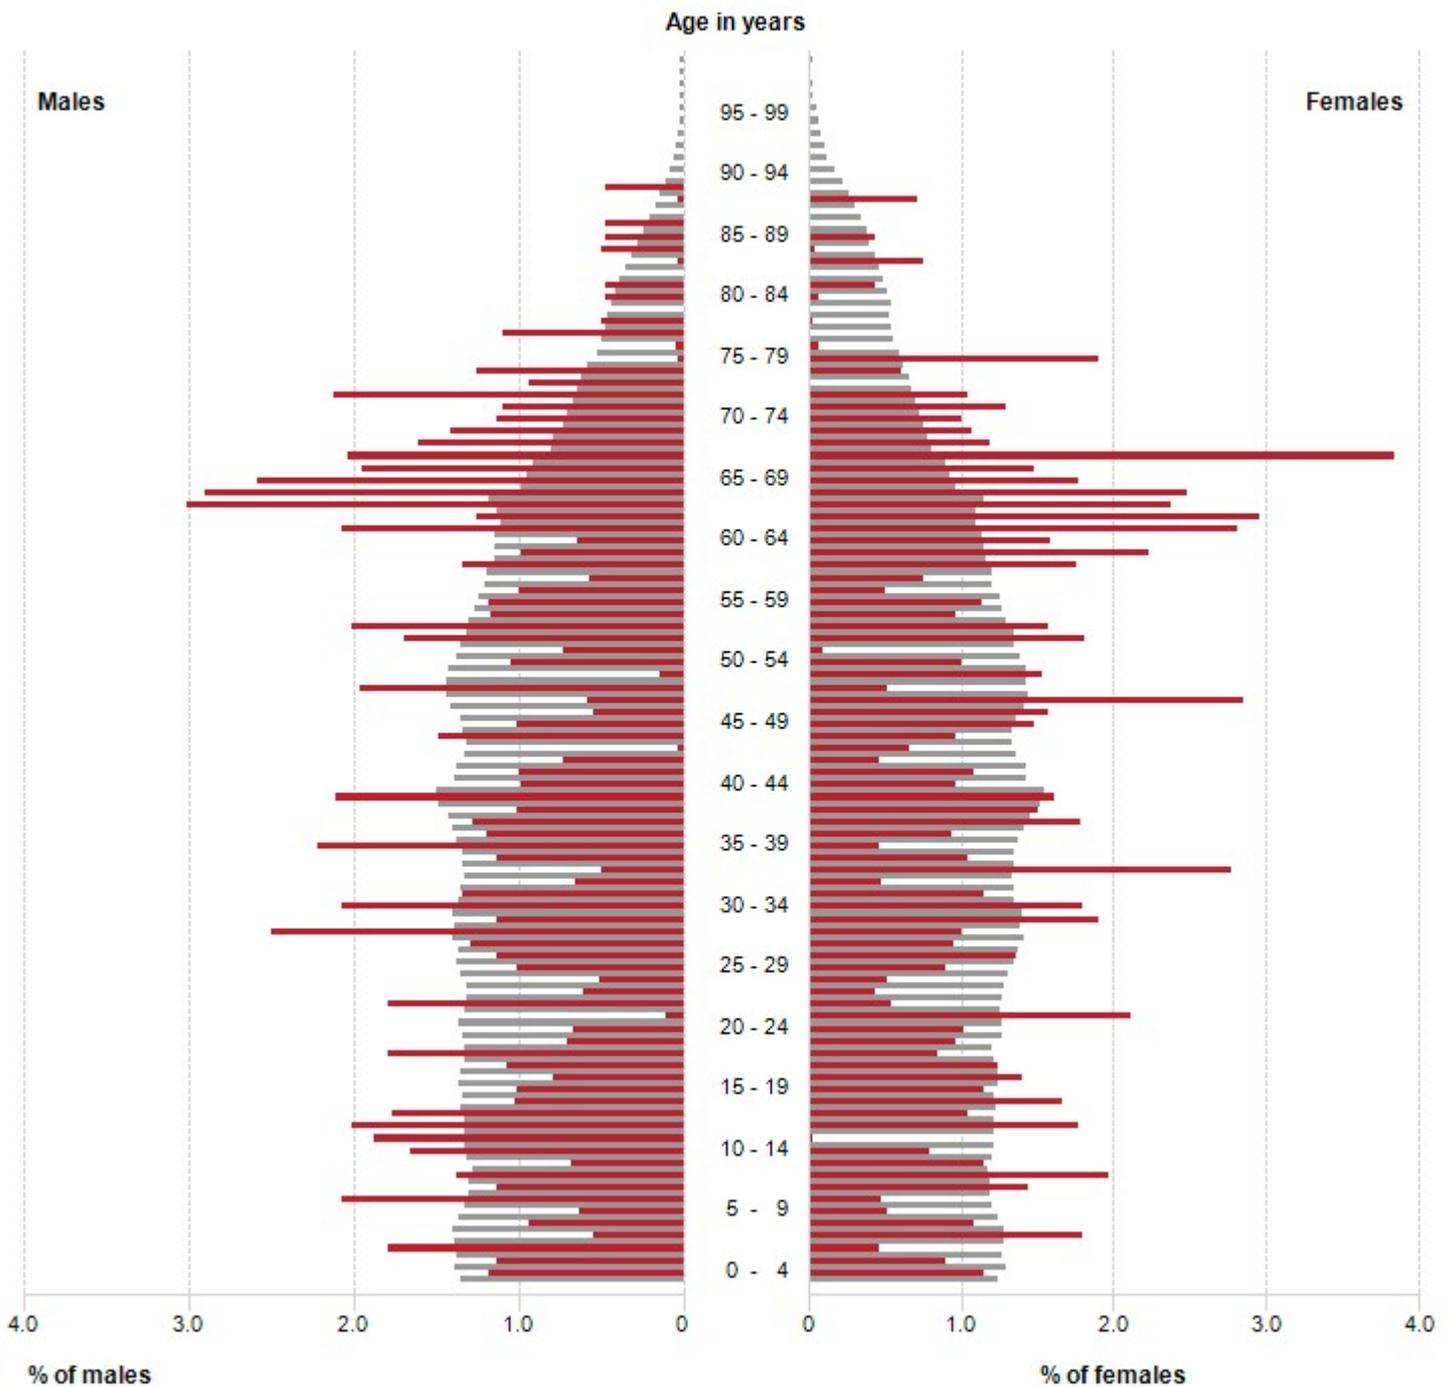

The Age Structure of Rankin Park provides key insights into the level of demand for age based services and facilities. It is also an indicator of Rankin Park's demographic role and function and how it is likely to change in the future.

Single year of age data is presented as an age-sex pyramid which enables the shape of the population to be compared geographically, temporally and by gender. For example, longer female life expectancy usually leads to the pyramid skewing to the right in the older age groups.

To get a more complete picture Rankin Park's Age Structure should be viewed in conjunction with [Household Types](#) and [Dwelling Types](#).

Ancestry

Ancestry defines the cultural association and ethnic background of an individual going back three generations. Ancestry is a good measure of the total size of cultural groups in Rankin Park regardless of where they were born or what language they speak.

Ancestry data, should be combined with data on [Birthplace](#), [Language Spoken at Home](#) and [Religion](#) for a more complete picture of Rankin Park's ethnic characteristics.

Ancestry - ranked by size

Dominant groups

Analysis of the ancestry responses of the population in Rankin Park in 2011 shows that the top five ancestries nominated were:

- Australian (607 people or 45.4%)
- English (562 people or 42.1%)
- Irish (170 people or 12.8%)
- Scottish (147 people or 11.0%)
- German (49 people or 3.7%)

In combination these five ancestries account for 1,535 responses in total, or 115.12% of all responses.

The major differences between the ancestries of the population in Rankin Park and New South Wales were:

- A *larger* percentage of people with Australian ancestry (45.4% compared to 32.1%)
- A *larger* percentage of people with English ancestry (42.1% compared to 31.1%)
- A *larger* percentage of people with Scottish ancestry (11.0% compared to 7.6%)
- A *larger* percentage of people with Irish ancestry (12.8% compared to 9.6%)

Emerging groups

The largest changes in the reported ancestries of the population in this area between 2006 and 2011 were:

- Australian (-133 persons)
- Irish (+67 persons)

Birthplace

Country of Birth data identifies where people were born and is indicative of the level of cultural diversity in Rankin Park. The mix of Country of Birth groups is also indicative of historical settlement patterns, as source countries for Australia's immigration program have varied significantly over time.

To get a more complete picture of cultural and ethnic characteristics, Rankin Park's Country of Birth data should be viewed together with [Ancestry](#), [Language Spoken at Home](#) and [Religion](#).

Birthplace - ranked by size

Rankin Park	2011			2006			Change

Not Stated	26	2.0	5.7	35	2.6	7.3	-9
Total Population	1,336	100.0	100.0	1,373	100.0	100.0	-37

Source: Australian Bureau of Statistics, [Census of Population and Housing](#) 2006 and 2011. Compiled and presented in profile.id by [.id](#), the population experts.

Dominant groups

Analysis of the country of birth of the population in Rankin Park in 2011 compared to New South Wales shows that there was a smaller proportion of people born overseas, as well as a smaller proportion of people from a non-English speaking background.

Overall, 9.2% of the population was born overseas, and 6.1% were from a non-English speaking background, compared with 25.7% and 18.6% respectively for New South Wales.

The major difference between the countries of birth of the population in Rankin Park and New South Wales was:

- A *smaller* percentage of people born in United Kingdom (2.4% compared to 4.0%)

Emerging groups

Between 2006 and 2011, the number of people born overseas increased by 3 or 2.5%, and the number of people from a non-English speaking background increased by 9 or 12.5%.

There were no major differences in Rankin Park between 2006 and 2011.

Year of arrival in Australia

The Year of Arrival data records when the overseas born population arrived in Australia. The data shows the degree to which areas are 'ports' for new overseas migrants and reveals the role of Rankin Park in housing the overseas-born. The number of recent arrivals in an area is often determined by housing affordability, employment opportunities and pre-existing communities located in the area.

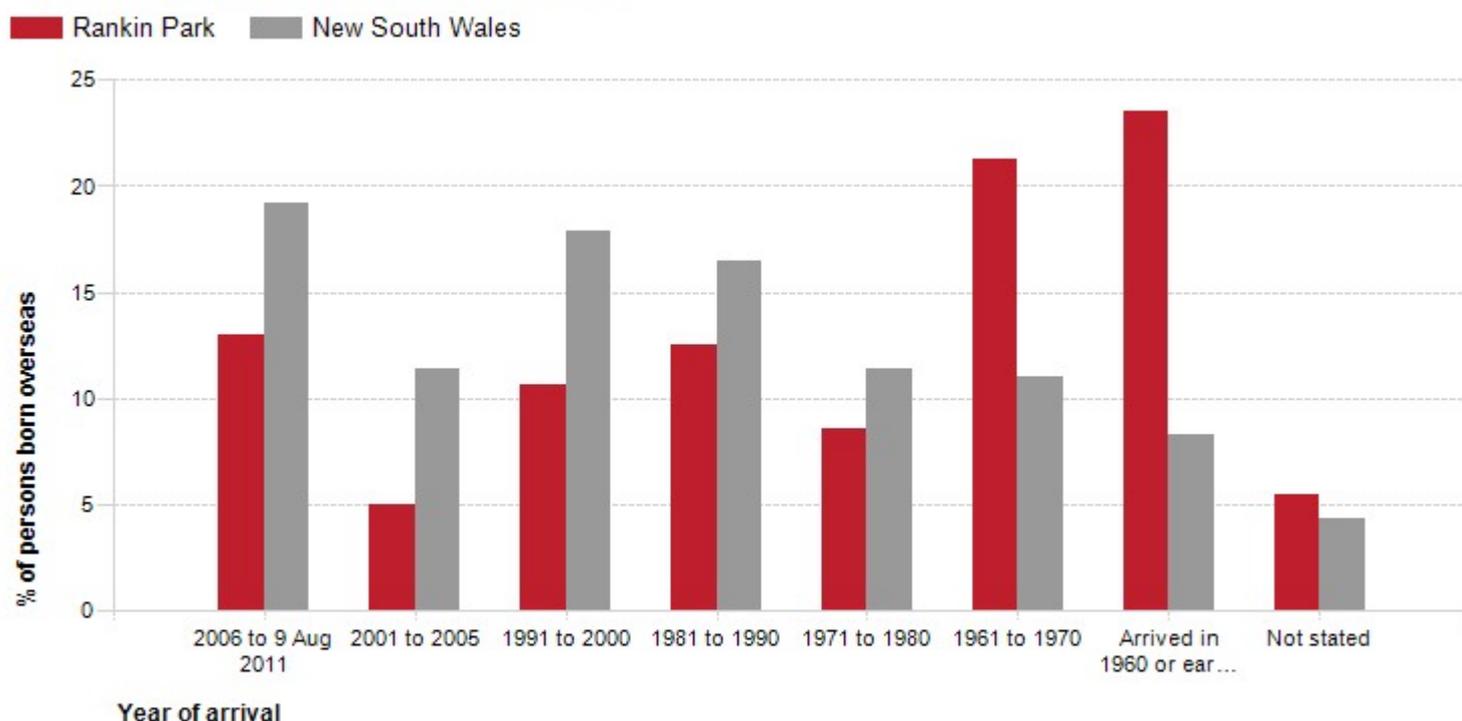

Rankin Park's Year of Arrival data, when used with Birthplace, Religion and Language Spoken at Home data, is a good indicator of the likely need for services in migrant communities.

Year of arrival in Australia

Rankin Park	2011		
Year of arrival in Australia	Number	%	New South Wales
2006 to 9 Aug 2011	16	13.0	19.2
2001 to 2005	6	5.0	11.4

Year of arrival in Australia, 2011

Source: Australian Bureau of Statistics, Census of Population and Housing, 2011 (Usual residence data)
Compiled and presented in profile.id by .id, the population experts.

Dominant groups

Analysis of the year of arrival for the overseas born population of Rankin Park in 2011 compared to New South Wales shows that there was a larger proportion of people who arrived before 2001, and a smaller proportion of recent arrivals (those who arrived between 2006 and 2011).

Overall, 76.5% of the overseas born population arrived before 2001, and 13.0% arrived during or after 2006, compared with 65.1% and 19.2% respectively for New South Wales.

The major differences between the year of arrival data of Rankin Park and New South Wales were:

- A *larger* percentage of arrivals between in 1960 or earlier (23.6% compared to 8.3%)
- A *larger* percentage of arrivals between 1961 and 1970 (21.3% compared to 11.0%)
- A *smaller* percentage of arrivals between 1991 and 2000 (10.6% compared to 17.9%)
- A *smaller* percentage of arrivals between 2001 and 2005 (5.0% compared to 11.4%)

Proficiency in English

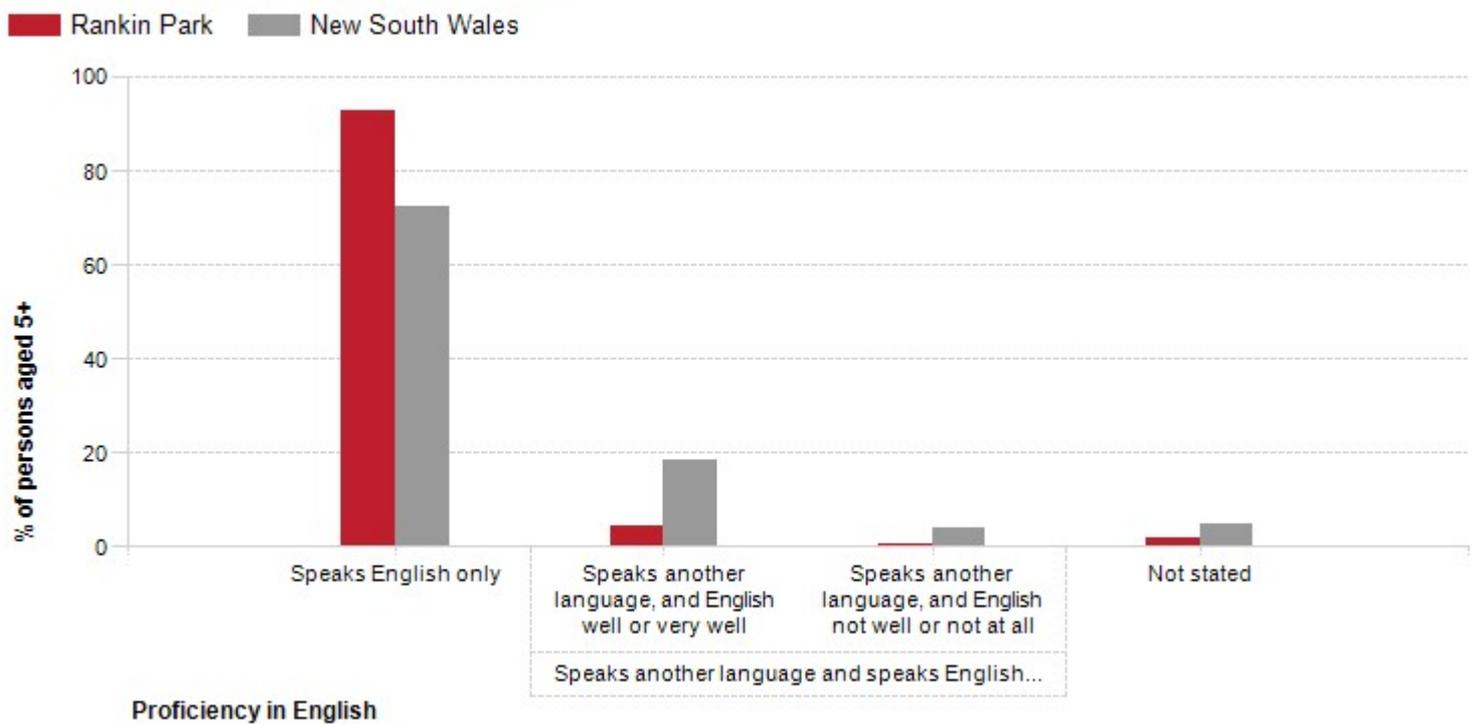

Proficiency in English measures the self-assessed proficiency in spoken English of people who speak a language other than English at home. The data, when viewed with other ethnic and cultural indicators, such as Ancestry, Country of Birth, Language Spoken at Home and Religion, reflects Rankin Park's ethnic composition and how long the overseas born have been in Australia. This helps service providers determine whether they need to communicate with the local population in languages other than English.

Proficiency in English

Rankin Park	2011			2006			Change
English proficiency	Number	%	New South Wales	Number	%	New South Wales	2006 to 2011
Speaks English only	1,243	92.9	72.5	1,292	94.1	74.0	-49
Speaks another language, and English well or very well	60	4.5	18.6	52	3.8	16.4	+8
Speaks another language, and English not well or not at all	10	0.8	3.9	7	0.6	3.7	+3
Not stated	24	1.8	5.0	20	1.5	5.9	+4

Change in proficiency in English, 2006 to 2011

Rankin Park

Source: Australian Bureau of Statistics, Census of Population and Housing, 2006 and 2011 (Usual residence data)
Compiled and presented in profile.id by .id, the population experts.

Dominant groups

Analysis of the proficiency in English data for Rankin Park in 2011 compared to New South Wales shows that there was a higher proportion of persons who spoke English only, and a lower proportion of persons who spoke another language and English not well or not at all.

Overall, 92.9% of persons spoke English only, and 0.8% spoke another language and English not well or not at all, compared with 72.5% and 3.9% respectively for New South Wales.

Emerging groups

There were no major differences in Rankin Park between 2006 and 2011.

Language spoken at home

Rankin Park's language statistics show the proportion of the population who speak a language at home other than English. They indicate how culturally diverse a population is and the degree to which different ethnic groups and nationalities are retaining their language.

Rankin Park's language statistics should be analysed in conjunction with Country of Birth and Proficiency in English to assist in identifying specific cultural and ethnic groups in the area and the services required by the multicultural community.

Language - summary

Rankin Park	2011			2006			Change
Language summary	Number	%	New South Wales	Number	%	New South Wales	2006 to 2011
Speaks English only	1,247	93.3	72.5	1,291	93.9	74.0	-44
Non-English total	60	4.5	22.5	63	4.6	20.1	-4
Not stated	29	2.2	5.1	20	1.5	5.9	+9
Total Population	1,337	100.0	100.0	1,375	100.0	100.0	-38

Source: Australian Bureau of Statistics, Census of Population and Housing 2006 and 2011. Compiled and presented in profile.id by .id, the population experts.

Dominant groups

Analysis of the language spoken at home by the population of Rankin Park in 2011 compared to New South Wales shows that there was a larger proportion of people who spoke English only, and a smaller proportion of those speaking a non-English language (either exclusively, or in addition to English).

Overall, 93.3% of the population spoke English only, and 4.5% spoke a non-English language, compared with 72.5% and 22.5% respectively for New South Wales.

Religion

Rankin Park's religion statistics provide an indicator of cultural identity and ethnicity when observed in conjunction with other key variables. Religion data reveal the major concentrations of religions as well as revealing the proportion of people with no religious affiliation. There are a number of reasons for different religious compositions across areas including the country of birth and ethnic background of the population, the age of the population (belief in religion is generally stronger, the older the population) and changes in values and belief systems.

Rankin Park's religion statistics should be analysed in conjunction with other ethnicity statistics such as [Country of Birth](#) data and [Language Spoken](#) data to assist in identifying specific cultural and ethnic groups.

Religions - ranked by size

Rankin Park	2011			2006			Change
Religion	Number	%	New South Wales	Number	%	New South Wales	2006 to 2011
Anglican	335	25.1	19.9	355	25.9	21.8	-20
Western (Roman) Catholic	327	24.5	27.0	335	24.4	27.7	-7
Uniting Church	99	7.5	3.9	152	11.1	4.6	-52
Presbyterian and Reformed	56	4.2	3.1	71	5.2	3.3	-15
Baptist	33	2.5	1.4	53	3.9	1.5	-20
Christian,nfd	33	2.5	1.8	19	1.4	1.4	+14

Excludes religions with fewer than 20 adherents, or less than 0.1% of the total population.

Dominant groups

Analysis of the religious affiliation of the population of Rankin Park in 2011 compared to New South Wales shows that there was a lower proportion of people who professed a religion and a higher proportion who stated they had no religion.

Overall, 73.0% of the population nominated a religion, and 20.8% said they had no religion, compared with 73.6% and 17.9% respectively for New South Wales.

The largest single religion in Rankin Park was Anglican, with 25.1% of the population or 335 people as adherents.

The major differences between the religious affiliation for the population of Rankin Park and New South Wales were:

- A *larger* percentage who nominated Anglican (25.1% compared to 19.9%)
- A *larger* percentage who nominated Uniting Church (7.5% compared to 3.9%)
- A *larger* percentage who nominated Presbyterian and Reformed (4.2% compared to 3.1%)
- A *larger* percentage who nominated Baptist (2.5% compared to 1.4%)

Emerging groups

The largest change in the religious affiliation of the population in Rankin Park between 2006 and 2011 was for those who nominated:

- Uniting Church (-52 persons)

Qualifications

Educational Qualifications relate to education outside of primary and secondary school and are one of the most important indicators of socio-economic status. With other data sources, such as [Employment Status](#), [Income](#) and [Occupation](#), Rankin Park's Educational Qualifications help to evaluate the economic opportunities and socio-economic status of the area and identify skill gaps in the labour market.

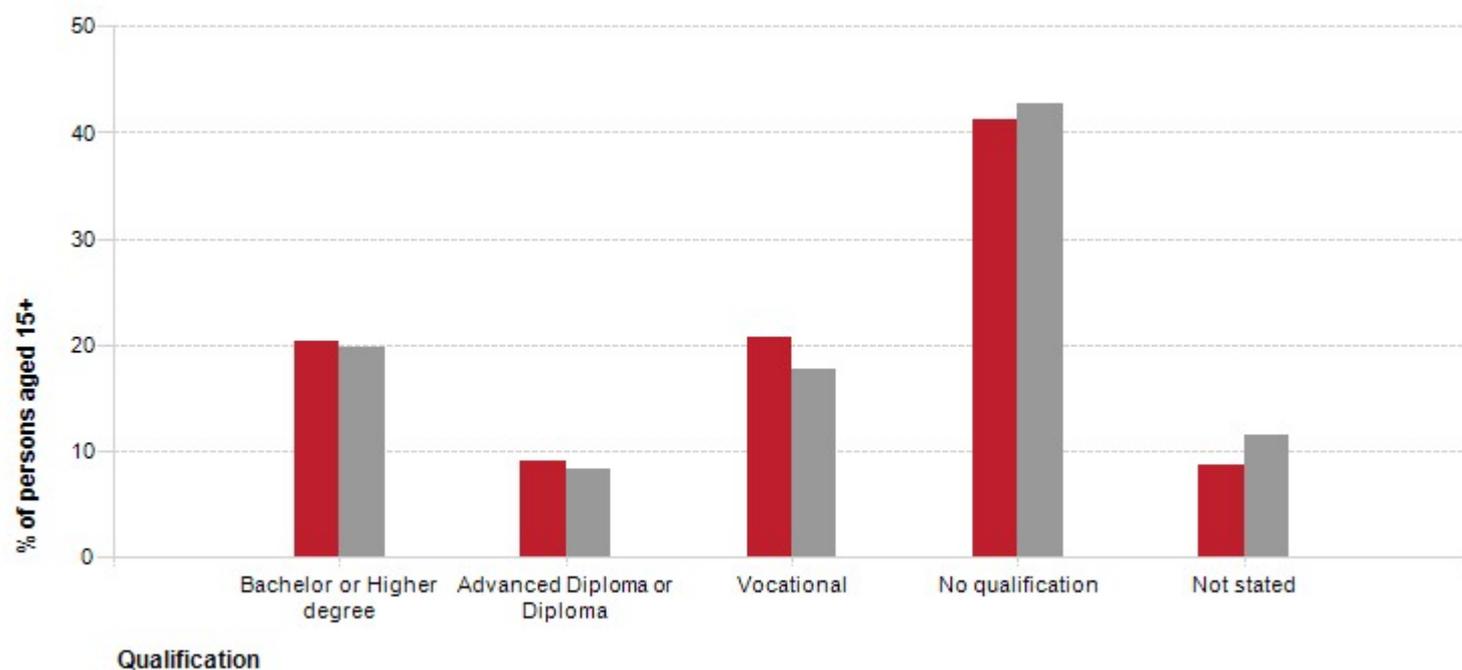

Highest qualification achieved

Rankin Park	2011			2006			Change
Qualification level	Number	%	New South Wales	Number	%	New South Wales	2006 to 2011
Bachelor or Higher degree	218	20.3	19.9	159	14.5	16.5	+59

Dominant groups

Analysis of the qualifications of the population in Rankin Park in 2011 compared to New South Wales shows that there was a higher proportion of people holding formal qualifications (Bachelor or higher degree; Advanced Diploma or Diploma; or Vocational qualifications), and a lower proportion of people with no formal qualifications.

Overall, 50.1% of the population aged 15 and over held educational qualifications, and 41.2% had no qualifications, compared with 45.8% and 42.8% respectively for New South Wales.

The major differences between qualifications held by the population of Rankin Park and New South Wales were:

- A larger percentage of persons with Vocational qualifications (20.7% compared to 17.7%)
- A smaller percentage of persons with No qualifications (41.2% compared to 42.8%)

Emerging groups

The largest change in the qualifications of the population in Rankin Park between 2006 and 2011 was:

- Bachelor or Higher degrees (+59 persons)

Highest level of schooling

Rankin Park's school completion data is a useful indicator of socio-economic status. With other indicators, such as [Proficiency in English](#), the data informs planners and decision-makers about people's ability to access services. Combined with [Educational Qualifications](#) it also allows assessment of the skill base of the population.

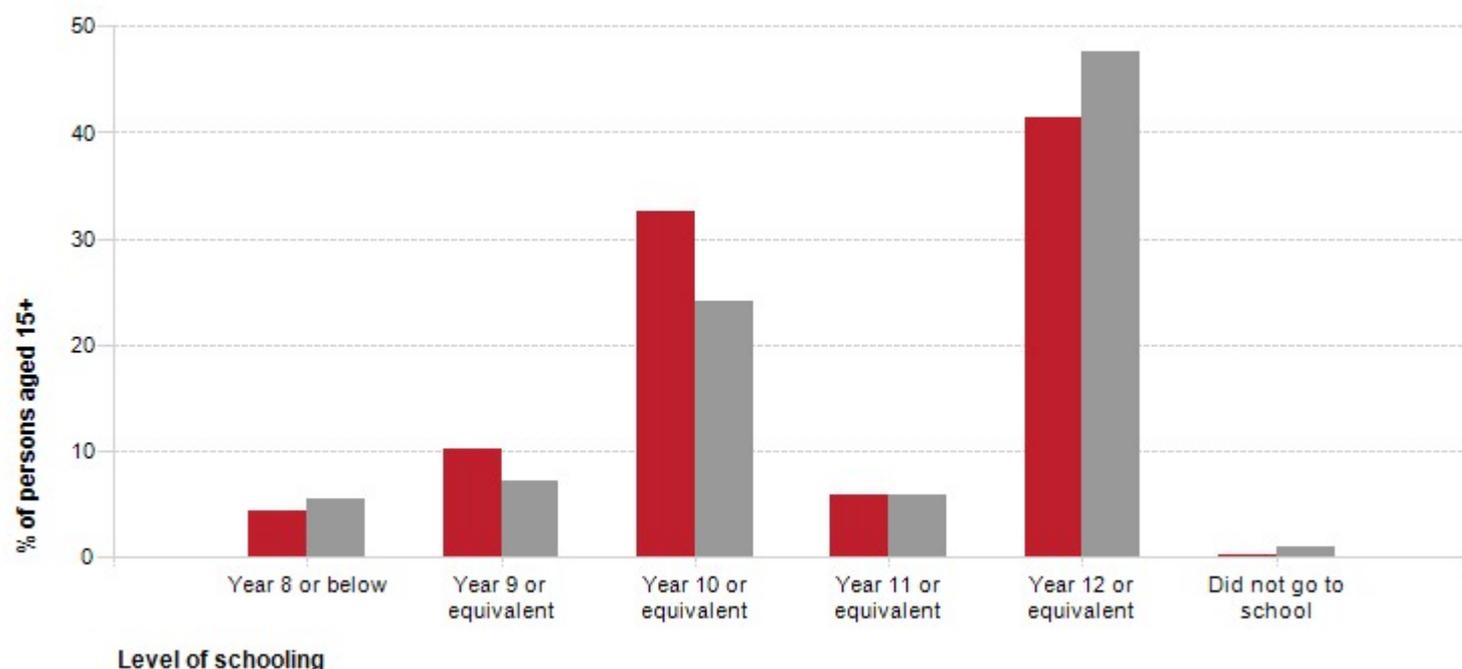

Highest level of secondary schooling completed

Rankin Park	2011			2006			Change
Level of schooling	Number	%	New South Wales	Number	%	New South Wales	2006 to 2011
Year 8 or below	46	4.4	5.6	46	4.2	6.7	0

Source: Australian Bureau of Statistics, Census of Population and Housing, 2006 and 2011 (Usual residence data)
Compiled and presented in profile.id by .id, the population experts.

Dominant groups

Analysis of the highest level of schooling attained by the population in Rankin Park in 2011 compared to New South Wales shows that there was a higher proportion of people who had left school at an early level (Year 10 or less) and a lower proportion of people who completed Year 12 or equivalent.

Overall, 47.5% of the population left school at Year 10 or below, and 41.5% went on to complete Year 12 or equivalent, compared with 37.9% and 47.6% respectively for New South Wales.

The major differences between the level of schooling attained by the population in Rankin Park and New South Wales were:

- A *larger* percentage of persons who completed year 10 or equivalent (32.6% compared to 24.1%)
- A *larger* percentage of persons who completed year 9 or equivalent (10.2% compared to 7.3%)
- A *smaller* percentage of persons who completed year 12 or equivalent (41.5% compared to 47.6%)
- A *smaller* percentage of persons who completed year 8 or below (4.4% compared to 5.6%)

Emerging groups

There were no major differences in Rankin Park between 2006 and 2011.

Education institution attending

The share of Rankin Park's population attending educational institutions reflects the age structure of the population, which influences the number of children attending school; proximity to tertiary education, which can mean young adults leaving home to be nearer to educational facilities and; the degree to which people are seeking out educational opportunities in adulthood, especially in their late teens and early twenties.

This data is often combined with [Age Structure](#) to identify areas with significant university student populations.

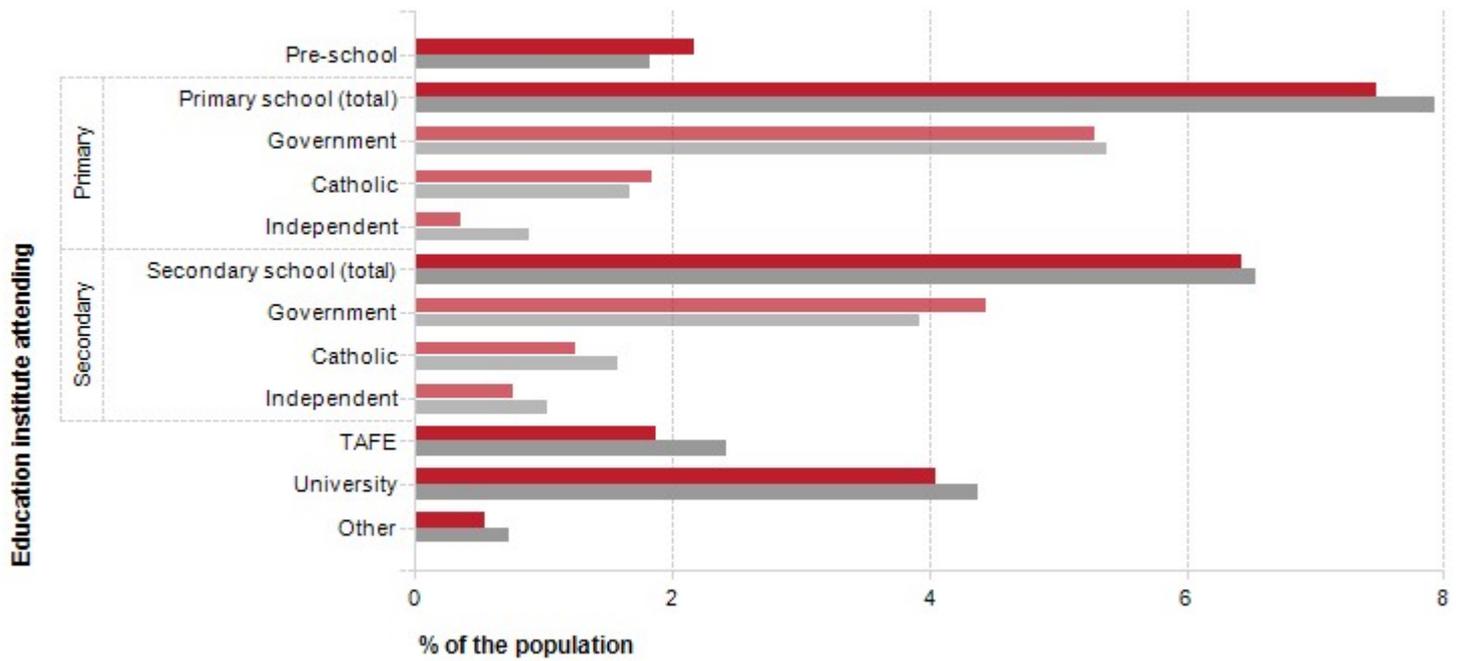

Education institute attending

Rankin Park	2011			2006			Change
Type of institute	Number	%	New South Wales	Number	%	New South Wales	2006 to 2011

Dominant groups

Analysis of the share of the population attending educational institutions in Rankin Park in 2011 compared to New South Wales shows that there was a similar proportion attending primary school, a similar proportion attending secondary school, and a lower proportion engaged in tertiary level education.

Overall, 7.5% of the population were attending primary school, 6.4% of the population were attending secondary institutions, and 5.9% were learning at a tertiary level, compared with 7.9%, 6.5% and 6.8% respectively for New South Wales.

The major difference between the share of the population attending learning institutions in Rankin Park and New South Wales was:

- A larger percentage of persons not attending (72.8% compared to 69.1%)

Emerging groups

From 2006 to 2011, Rankin Park's population aged 15 years and over decreased by 36 people (+2.6%). This represents an average annual change of -0.53% per year over the period.

There were no major differences in Rankin Park between 2006 and 2011.

Need for assistance

Rankin Park's disability statistics relate directly to need for assistance due to a severe or profound disability. The information may be used in the planning of local facilities, services such as day-care and occasional care and in the provision of information and support to carers. Rankin Park's disability statistics help in understanding the prevalence of people who need support in the community, and along with information on Unpaid Care to a person with a disability, how that support is provided.

Please note: A person's reported need for assistance is based on a subjective assessment and should therefore be treated with caution. See the specific data notes for further detail.

Dominant groups

Analysis of the need for assistance of persons in the City of Newcastle compared to New South Wales shows that there was a lower proportion of persons who reported needing assistance with core activities.

Overall, 4.0% of the population reported needing assistance with core activities, compared with 4.9% for New South Wales.

The major differences in the age groups reporting a need for assistance in Rankin Park and New South Wales were:

- A *larger* percentage of persons aged 5 to 9 (16.1% compared to 2.6%)
- A *smaller* percentage of persons aged 85 and over (26.3% compared to 48.3%)
- A *smaller* percentage of persons aged 75 to 79 (0.0% compared to 16.6%)
- A *smaller* percentage of persons aged 80 to 84 (18.8% compared to 26.4%)

Emerging groups

There were no major differences in Rankin Park between 2006 and 2011.

Employment status

Rankin Park's employment statistics are an important indicator of socio-economic status. The levels of full or part-time employment, unemployment and labour force participation indicate the strength of the local economy and social characteristics of the population. Employment status is linked to a number of factors including Age Structure, which influences the number of people in the workforce; the economic base and employment opportunities available in the area and; the education and skill base of the population (Occupations, Industries, Qualifications).

Employment status

Rankin Park	2011			2006			Change
Employment status	Number	%	New South Wales	Number	%	New South Wales	2006 to 2011

Change in employment status, 2006 to 2011

Rankin Park

Source: Australian Bureau of Statistics, Census of Population and Housing, 2006 and 2011 (Usual residence data)
Compiled and presented in profile.id by .id, the population experts.

Dominant groups

The size of Rankin Park's labour force in 2011 was 662 persons, of which 233 were employed part-time and 403 were full time workers.

Analysis of the employment status (as a percentage of the labour force) in Rankin Park in 2011 compared to New South Wales shows that there was a higher proportion in employment, and a lower proportion unemployed. Overall, 96.4% of the labour force was employed (59.5% of the population aged 15+), and 3.6% unemployed (2.2% of the population aged 15+), compared with 94.1% and 5.9% respectively for New South Wales.

The labour force participation rate refers to the proportion of the population over 15 years of age that was employed or actively looking for work. *"The labour force is a fundamental input to domestic production. Its size and composition are therefore crucial factors in economic growth. From the viewpoint of social development, earnings from paid work are a major influence on levels of economic well-being."* (Australian Social Trends 1995).

Analysis of the labour force participation rate of the population in Rankin Park in 2011 shows that there was a higher proportion in the labour force (61.7%) compared with New South Wales (59.7%).

Emerging groups

Between 2006 and 2011, the number of people employed in Rankin Park showed a decrease of 58 persons and the number unemployed showed a decrease of 6 persons. In the same period, the number of people in the labour force showed a decrease of 64 persons, or 8.8%.

Industry sectors of employment

Rankin Park's industry statistics identify the industry sectors in which the residents work (which may be within the residing area or elsewhere). This will be influenced by the skill base and socio-economic status of the residents as well as the industries and employment opportunities present in the region.

When viewed in conjunction with [Residents Place of Work](#) data and [Method of Travel to Work](#), industry sector statistics provide insights into the relationship between the economic and residential role of the area.

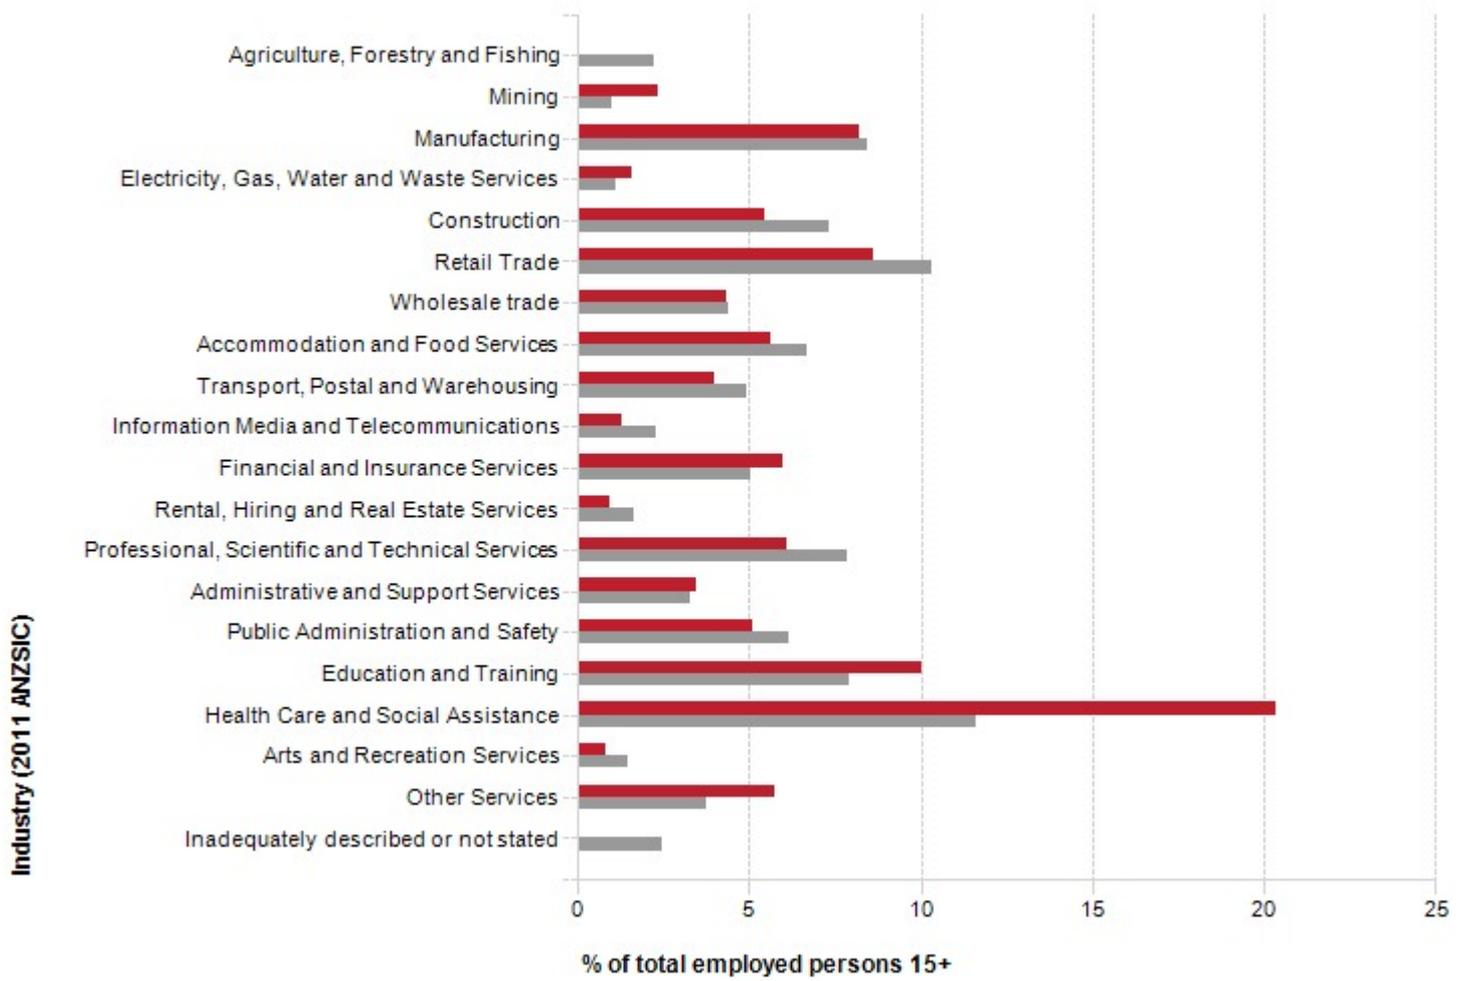

Industry sector of employment

Occupations of employment

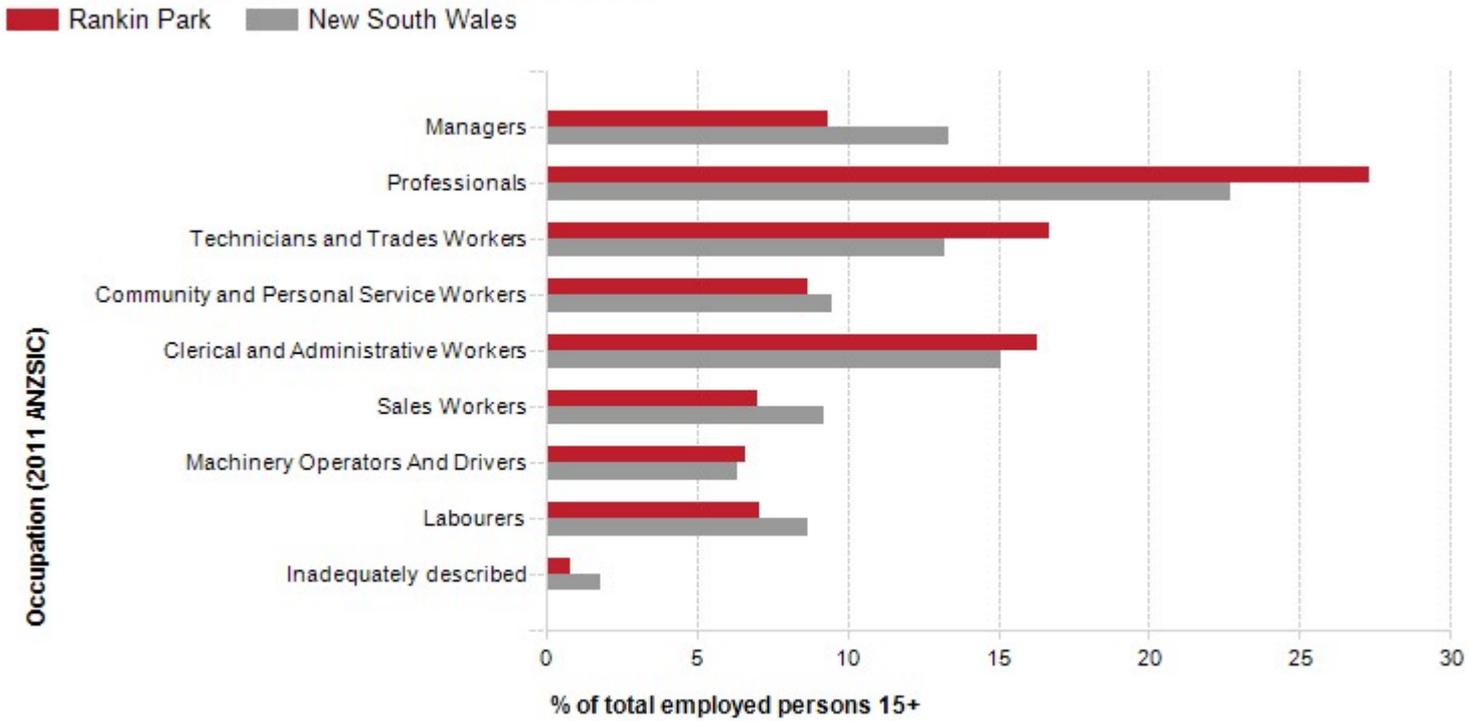

Rankin Park's occupation statistics quantify the occupations in which the residents work (which may be within the residing area or elsewhere). This will be influenced by the economic base and employment opportunities available in the area, education levels, and the working and social aspirations of the population. When viewed with other indicators, such as Educational Qualifications and Individual Income, Occupation is a key measure for evaluating Rankin Park's socio-economic status and skill base.

Occupation of employment

Rankin Park	2011			2006			Change
Occupation	Number	%	New South Wales	Number	%	New South Wales	2006 to 2011

Dominant groups

An analysis of the jobs held by the resident population in Rankin Park in 2011 shows the three most popular occupations were:

- Professionals (173 people or 27.3%)
- Technicians and Trades Workers (106 people or 16.7%)
- Clerical and Administrative Workers (103 people or 16.3%)

In combination these three occupations accounted for 382 people in total or 60.3% of the employed resident population.

In comparison, New South Wales employed 22.7% in Professionals; 13.2% in Technicians and Trades Workers; and 15.1% in Clerical and Administrative Workers.

The major differences between the jobs held by the population of Rankin Park and New South Wales were:

- A *larger* percentage of persons employed as Professionals (27.3% compared to 22.7%)
- A *larger* percentage of persons employed as Technicians and Trades Workers (16.7% compared to 13.2%)
- A *larger* percentage of persons employed as Clerical and Administrative Workers (16.3% compared to 15.1%)
- A *smaller* percentage of persons employed as Managers (9.4% compared to 13.3%)

Emerging groups

The number of employed people in Rankin Park decreased by 61 between 2006 and 2011.

There were no major differences in Rankin Park between 2006 and 2011.

Method of travel to work

Rankin Park's commuting statistics reveal the main modes of transport by which residents get to work. There are a number of reasons why people use different modes of transport to get to work including the availability of affordable and effective public transport options, the number of motor vehicles available within a household, and the distance travelled to work.

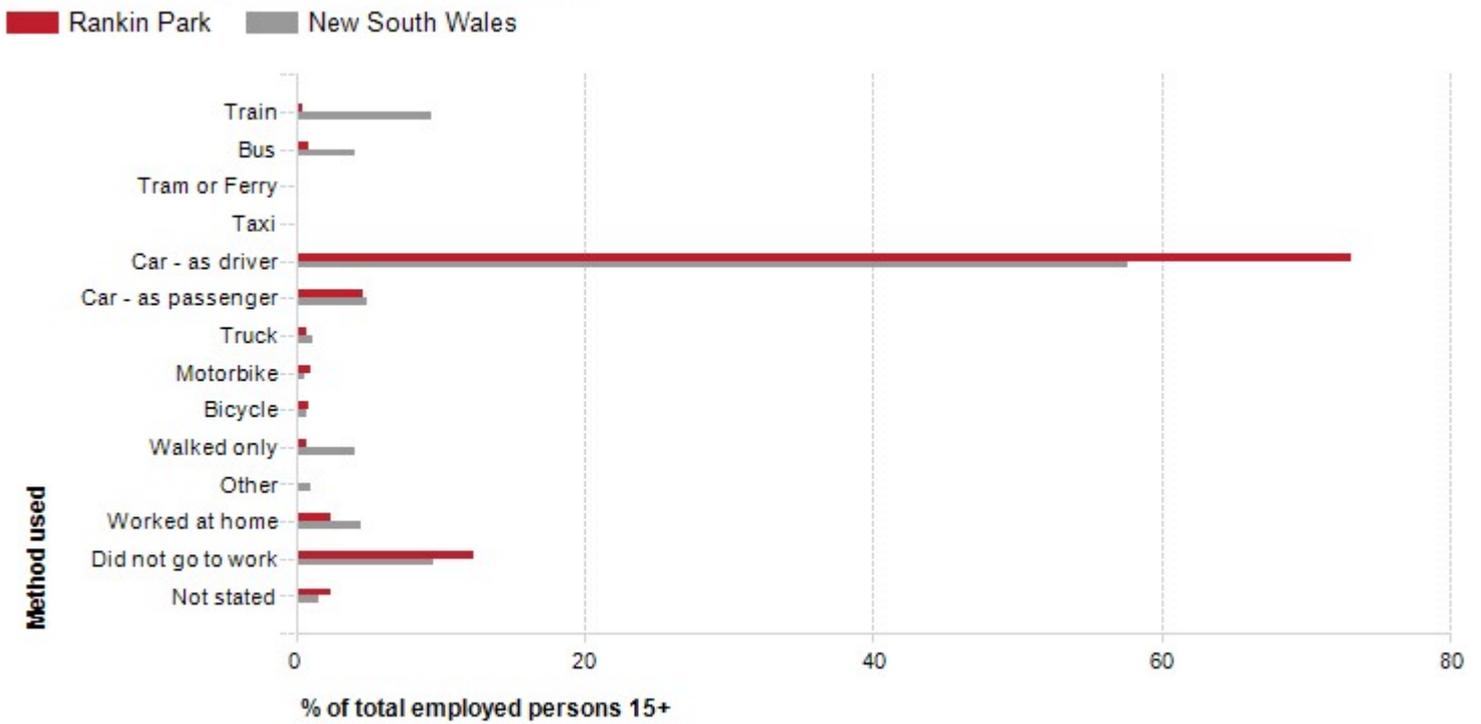

Commuting data is very useful in transport planning as it informs decision-makers about the availability, effectiveness and utilisation of local transport options, particularly when analysed with [Residents Place of Work](#) data and [Car Ownership](#).

Method of travel to work

Dominant groups

In 2011, there were 8 people who caught public transport to work (train, bus, tram or ferry) in Rankin Park, compared with 501 who drove in private vehicles (car – as driver, car – as passenger, motorbike, or truck).

Analysis of the method of travel to work of the residents in Rankin Park in 2011 compared to New South Wales shows that 1.4% used public transport, while 79.7% used a private vehicle, compared with 13.7% and 64.5% respectively in New South Wales.

The major differences between the method of travel to work of Rankin Park and New South Wales were:

- A *larger* percentage of persons who travelled by car (as driver) (73.2% compared to 57.7%)
- A *larger* percentage of persons who did not go to work (12.4% compared to 9.5%)
- A *smaller* percentage of persons who travelled by train (0.5% compared to 9.4%)
- A *smaller* percentage of persons who walked only (0.7% compared to 4.1%)

Emerging groups

The number of employed people in Rankin Park decreased by 48 between 2006 and 2011.

There were no major differences in Rankin Park between 2006 and 2011.

Unpaid domestic work

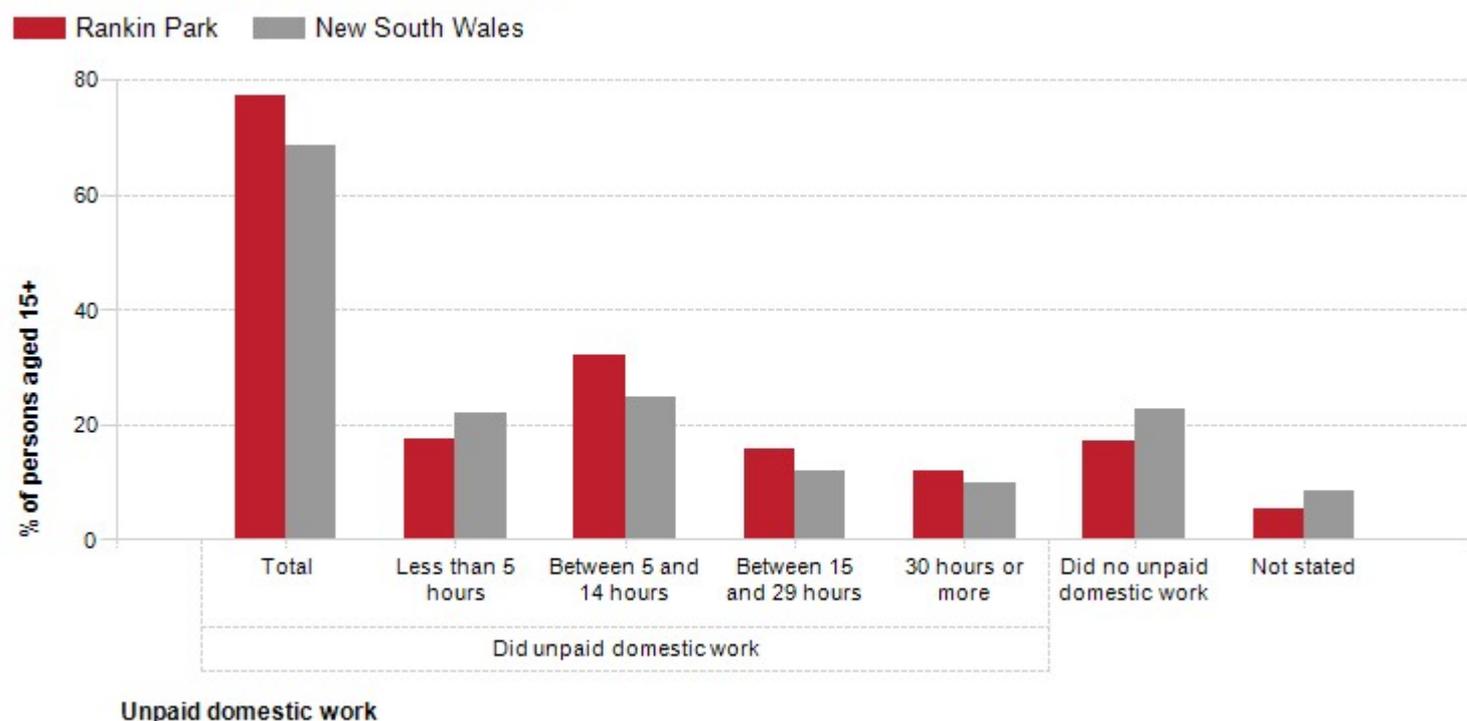

There has been increased interest in identifying, acknowledging and valuing the unpaid work that supports home and community life. The changing amount of time spent on unpaid housework in different Household Types and, particularly the distribution of this work within the household, can indicate the changing roles of males, females and older children in society. The level of unpaid domestic work in Rankin Park may also be related to Household Income, as higher income households are able to outsource some of these tasks.

Unpaid domestic work

Rankin Park	2011			2006			Change
Hours spent on unpaid domestic work	Number	%	New South Wales	Number	%	New South Wales	2006 to 2011
Did unpaid domestic work	831	77.4	68.7	872	79.0	68.3	-40
▪ Less than 5 hours	187	17.4	22.0	242	22.0	21.4	-55

Compiled and presented in profile.id by .id, the population experts.

Dominant groups

Analysis of the unpaid domestic work performed by the population in Rankin Park in 2011 compared to New South Wales shows that there was a higher proportion of persons who performed 15 hours or more of unpaid domestic work per week.

Overall, 27.8% of the population reported performing 15 hours or more of unpaid domestic work, compared with 21.9% for New South Wales.

The major differences between the share of the population performing unpaid domestic work in Rankin Park and New South Wales were:

- A larger percentage of persons who did less than 5 hours of domestic work (77.4% compared to 68.7%)
- A larger percentage of persons who did between 15 and 29 hours of domestic work (32.2% compared to 24.9%)
- A larger percentage of persons who did 30 hours or more of domestic work (15.8% compared to 11.8%)
- A larger percentage of persons who did unpaid domestic work (total) (12.0% compared to 10.0%)

Emerging groups

The largest changes in the number of people performing unpaid domestic work in Rankin Park, between 2006 and 2011 were those who:

- Did less than 5 hours of domestic work (-55 persons)
- Did between 5 and 14 hours of domestic work (+49 persons)

Unpaid childcare

The role of unpaid childcare in Rankin Park is determined by many different factors. For example areas with high levels of unpaid child care may have a dominance of single income families with one significant earner, or there could be a lack of provision of paid child care in the area. The level to which people care for others children can also indicate the role of extended family (eg. grandparents caring for grandchildren, family day care).

The role of unpaid child care is a complex one so this topic should be viewed in conjunction with several others, including Household Type, Employment, Household Income and Educational Attendance.

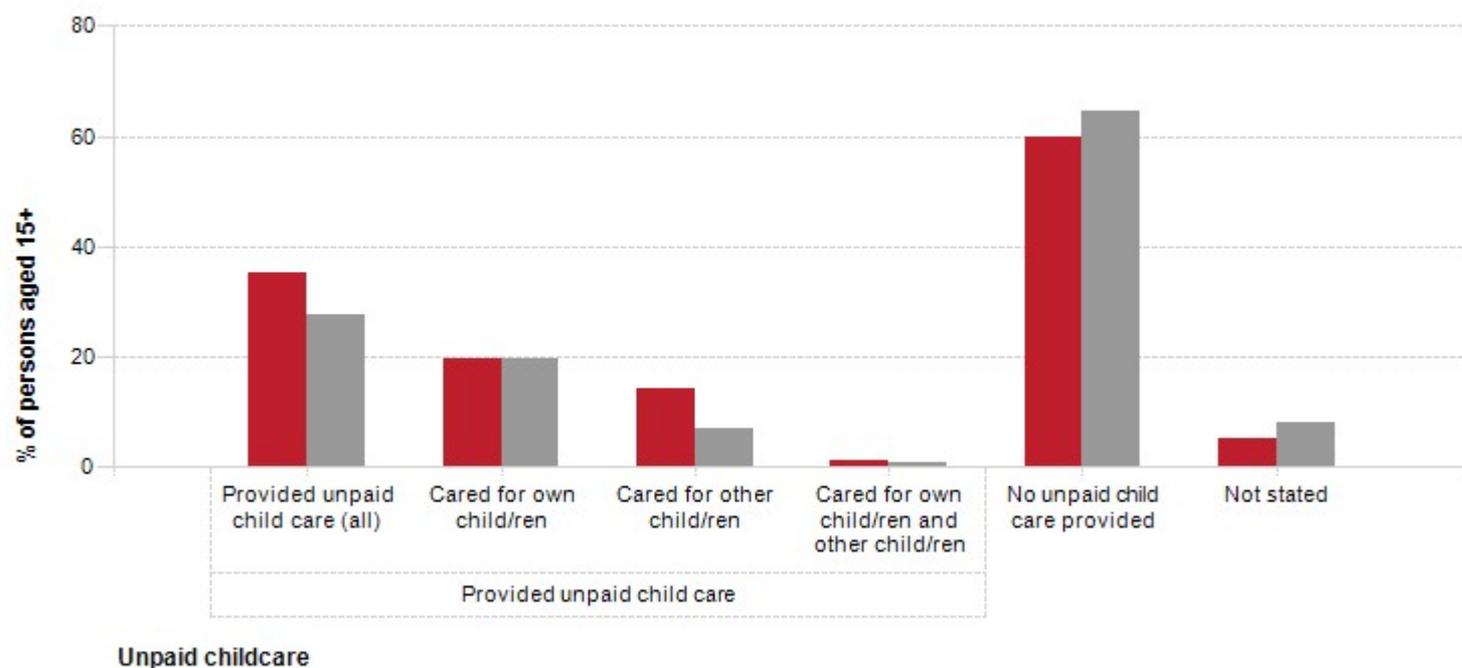

Unpaid childcare

Rankin Park	2011			2006			Change
Unpaid child care	Number	%	New South Wales	Number	%	New South Wales	2006 to 2011
Provided unpaid child care (all)	376	35.0	27.5	418	37.9	27.0	-41
▪ Cared for own child/ren	210	19.6	19.6	226	20.5	19.2	-16
▪ Cared for other child/ren	153	14.3	7.1	177	16.1	6.9	-24
▪ Cared for own child/ren and other child/ren	12	1.2	0.8	14	1.3	0.9	-2
No unpaid child care provided	643	59.8	64.6	642	58.2	63.5	+1

Dominant groups

Analysis of the unpaid child care provided by the population in Rankin Park in 2011 compared to New South Wales shows that there was a higher proportion of persons who provided unpaid child care either to their own or to other children. Overall, 35.0% of the population provided unpaid child care, compared with 27.5% for New South Wales.

The major differences between the share of the population providing unpaid child care in Rankin Park and New South Wales were:

- A larger percentage who Provided unpaid child care (all) (35.0% compared to 27.5%)
- A larger percentage who Cared for other child/ren (14.3% compared to 7.1%)
- A smaller percentage who No unpaid child care provided (59.8% compared to 64.6%)

Emerging groups

The number of people who provided unpaid child care for their own and/or other people's children in Rankin Park decreased by 42 between 2006 and 2011.

There were no major differences in Rankin Park between 2006 and 2011.

Individual income

Individual Income statistics are an indicator of socio-economic status. With other data sources, such as [Household Income](#), [Educational Qualifications](#) and [Occupation](#), they help tell the story of the economic opportunities and socio-economic status of Rankin Park. The amount of income an individual receives is linked to a number of factors including [employment status](#), [age](#) (as for instance students and retirees often receive a lower income), qualifications and type of employment.

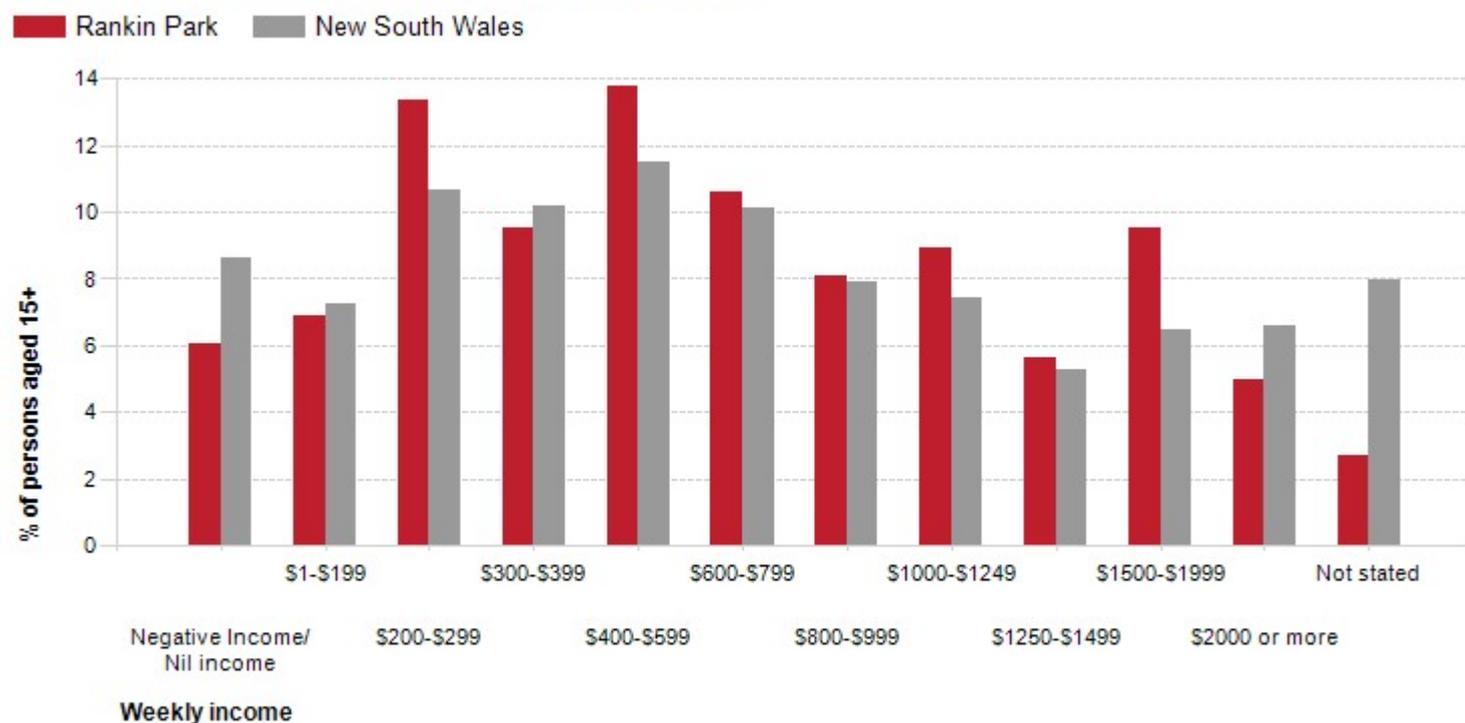

The incomes presented on this page are for the latest Census year only. For comparison of incomes over time, go to [Individual Income Quartiles](#).

Weekly individual gross income

Rankin Park	2011		
Weekly income	Number	%	New South Wales
Negative Income/ Nil income	65	6.1	8.6

Weekly individual gross income, 2011

Source: Australian Bureau of Statistics, Census of Population and Housing, 2011 (Usual residence data)
Compiled and presented in profile.id by .id, the population experts.

Dominant groups

Analysis of individual income levels in Rankin Park in 2011 compared to New South Wales shows that there was a higher proportion of persons earning a high income (those earning \$1,500 per week or more) and a lower proportion of low income persons (those earning less than \$400 per week).

Overall, 14.5% of the population earned a high income, and 35.8% earned a low income, compared with 13.1% and 36.7% respectively for New South Wales.

The major differences between Rankin Park's individual incomes and New South Wales's individual incomes were:

- A larger percentage of persons who earned \$1500-\$1999 (9.5% compared to 6.5%)
- A larger percentage of persons who earned \$200-\$299 (13.3% compared to 10.7%)
- A larger percentage of persons who earned \$400-\$599 (13.8% compared to 11.5%)
- A larger percentage of persons who earned \$1000-\$1249 (8.9% compared to 7.5%)

Individual income quartiles

Rankin Park's income statistics are an indicator of socio-economic status. With other data sources, such as [Household Income](#), [Educational Qualifications](#) and [Occupation](#), they help tell the story of the area's economic opportunities and socio-economic status. Individual income levels are not comparable over time because of the influences of economic change such as wage level fluctuations and inflation. The income quartile method is the most objective method of comparing change in the income profile of a community over time.

A detailed explanation of how Individual Income quartiles are calculated and interpreted is available in [specific data notes](#).

Individual income quartiles

Dominant groups

Income quartiles allow us to compare relative income-earning capabilities across time. Analysis of the distribution of the population by income quartile in Rankin Park compared to New South Wales shows that there was greater proportion of persons in the highest income quartile, and a lesser proportion in the lowest income quartile.

Emerging groups

The most significant change in Rankin Park between 2006 and 2011 was in the medium highest quartile which showed a slight decrease of -32 persons.

Household income

Households form the common 'economic unit' in our society. Rankin Park's Household Income is one of the most important indicators of socio-economic status. With other data sources, such as [Educational Qualifications](#) and [Occupation](#), it helps to reveal the economic opportunities and socio-economic status of Rankin Park. It is important to note that income data is not necessarily a measure of wealth. For example, if an area has a large number of retirees this will produce a higher proportion of households with low income but the retirees may have large capital wealth. For this reason, household income should be viewed in conjunction with [Age](#) and [Household Composition](#).

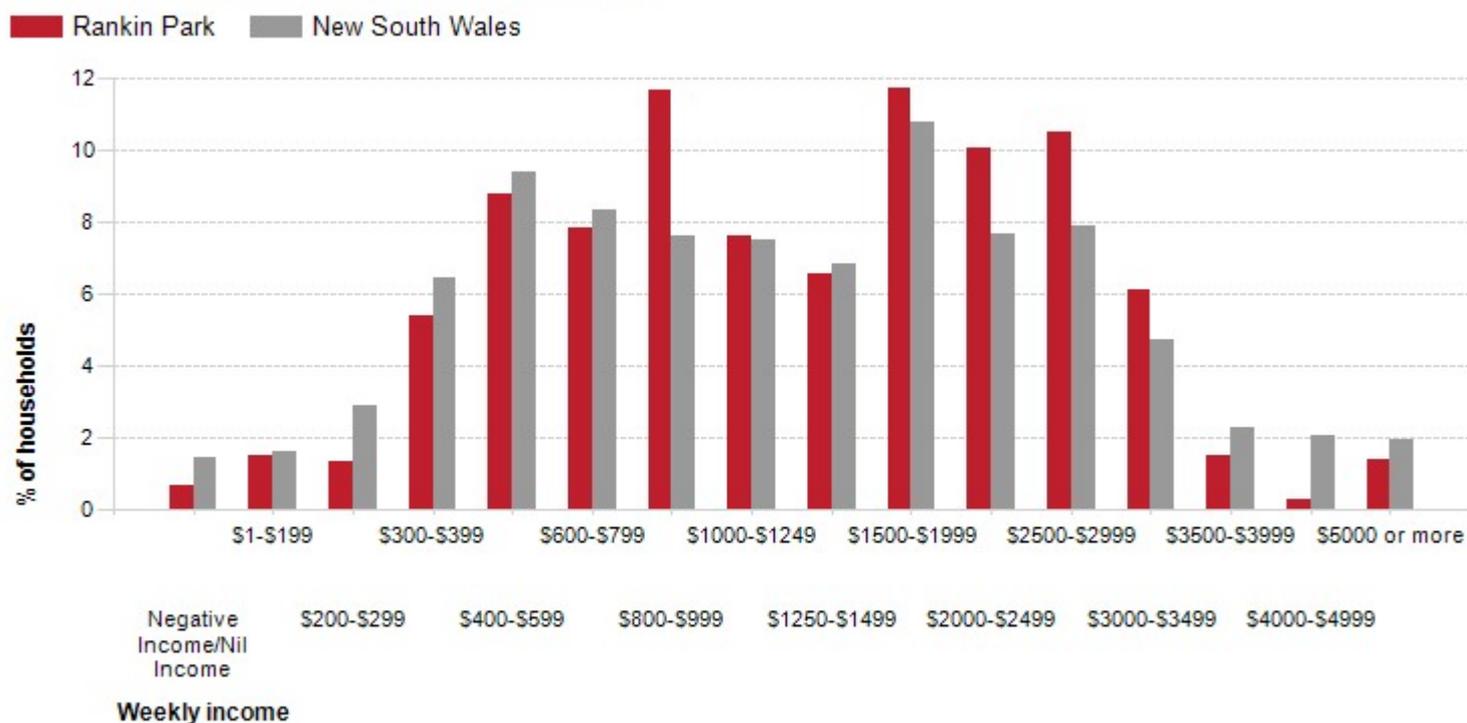

The incomes presented on this page are for the latest Census year only. For comparison of incomes over time, go to [Household Income Quartiles](#).

Weekly household income

Rankin Park	2011

Weekly household income, 2011

Source: Australian Bureau of Statistics, Census of Population and Housing, 2011 (Enumerated data)
Compiled and presented in profile.id by .id, the population experts.

Dominant groups

Analysis of household income levels in Rankin Park in 2011 compared to New South Wales shows that there was a larger proportion of high income households (those earning \$2,500 per week or more) and a lower proportion of low income households (those earning less than \$600 per week).

Overall, 19.7% of the households earned a high income, and 17.6% were low income households, compared with 18.9% and 21.7% respectively for New South Wales.

The major differences between the household incomes of Rankin Park and New South Wales were:

- A larger percentage of households who earned \$800-\$999 (11.7% compared to 7.6%)
- A larger percentage of households who earned \$2500-\$2999 (10.5% compared to 7.9%)
- A larger percentage of households who earned \$2000-\$2499 (10.0% compared to 7.7%)
- A larger percentage of households who earned \$3000-\$3499 (6.1% compared to 4.7%)

Household income quartiles

Households form the common 'economic unit' in our society. Household Income is one of the most important indicators of socio-economic status. With other data sources, such as [Educational Qualifications](#) and [Occupation](#), it helps to reveal Rankin Park's socio-economic status and economic opportunities. Household income levels are not comparable over time because of the influences of economic change such as wage level fluctuations and inflation. The income quartile method is a powerful and objective way of looking at income data and in particular, how it is changing.

A detailed explanation of how Household Income quartiles are calculated and interpreted is available in [specific data notes](#).

Dominant groups

Income quartiles allow us to compare relative income-earning capabilities across time. Analysis of the distribution of households by income quartile in Rankin Park compared to New South Wales shows that there was greater proportion of households in the highest income quartile, and a lesser proportion in the lowest income quartile.

Emerging groups

The most significant change in Rankin Park between 2006 and 2011 was in the medium highest quartile which showed a slight decrease of -32 households.

Equivalised household income

While Household Income is a useful measure, it is difficult to tell if changes over time and between geographic areas are due to actual changes in income levels, or due to changes in household size and composition. For example, an increase in lower income households could be due to job losses in key economic sectors, or simply due to decreasing household size as adult children leave home.

Equivalised Household Income puts all households on an equal footing independent of household size and composition to enable a true comparison between areas and over time. It is an indicator of the income resource available to a household of standard size and is the best measure of the changing economic fortunes of households living in Rankin Park.

A detailed explanation of how Equivalised Household Income quartiles are calculated and interpreted is available in [specific data notes](#).

Equivalised household income quartiles

Rankin Park

Source: Australian Bureau of Statistics, Census of Population and Housing, 2006 and 2011 (Enumerated data)
Compiled and presented in profile.id by .id, the population experts.

Dominant groups

Equivalised income quartiles allow us to compare relative income-earning capabilities across time. Because the data are equivalised, households of different size and composition are placed on an equal footing.

Analysis of the distribution of households by income quartile in Rankin Park compared to New South Wales shows that there was a lesser proportion of households in the highest equivalised income quartile, as well as a lesser proportion in the lowest equivalised income quartile.

Emerging groups

The most significant change in Rankin Park between 2006 and 2011 was in the lowest quartile which showed an increase of 21 households.

Households summary

Rankin Park's household and family structure is one of the most important demographic indicators. It reveals the area's residential role and function, era of settlement and provides key insights into the level of demand for services and facilities as most are related to age and household types.

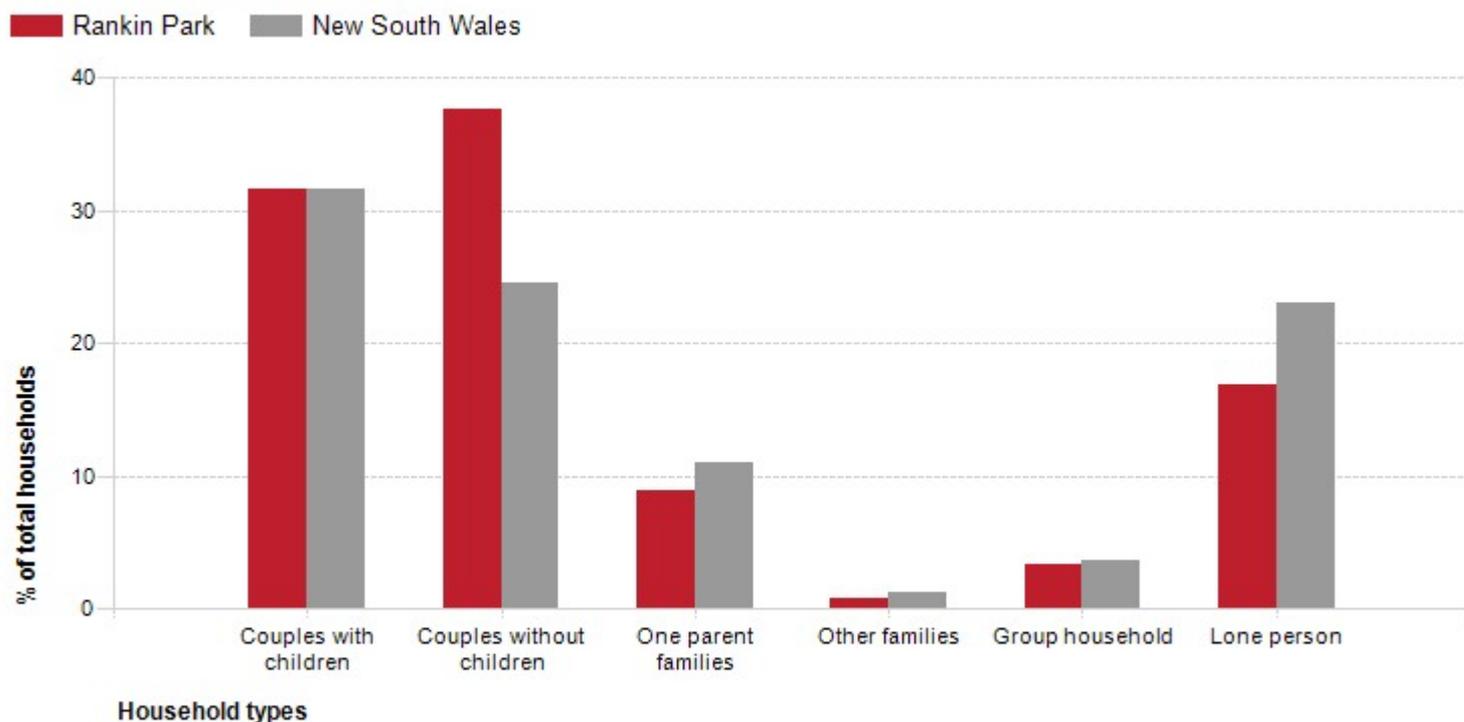

To continue building the story, Rankin Park's Household Summary should be viewed in conjunction with [Households with Children](#), [Households without Children](#), [Household Size](#), [Age Structure](#) and [Dwelling Type](#).

Household types

Rankin Park	2011			2006			Change

Change in household types, 2006 to 2011

Source: Australian Bureau of Statistics, Census of Population and Housing, 2006 and 2011 (Enumerated data)
Compiled and presented in profile.id by .id, the population experts.

Dominant groups

Analysis of the household/family types in Rankin Park in 2011 compared to New South Wales shows that there was a similar proportion of couple families with child(ren) as well as a lower proportion of one-parent families. Overall, 31.6% of total families were couple families with child(ren), and 8.9% were one-parent families, compared with 31.7% and 11.0% respectively for New South Wales.

There were a lower proportion of lone person households and a higher proportion of couples without children. Overall, the proportion of lone person households was 16.9% compared to 23.1% in New South Wales while the proportion of couples without children was 37.6% compared to 24.5% in New South Wales.

Emerging groups

The number of households in Rankin Park increased by 4 between 2006 and 2011.

There were no major differences in Rankin Park between 2006 and 2011.

Households with children

Households with Children require different services and facilities than other household types, and their needs change as both adults and children age. When many families in an area are at the same stage in their individual lifecycles, it creates a suburb lifecycle. Knowing where a suburb is in a cycle of change helps planners make evidence-based decisions about the demand for services both now and in the future.

For Households with Children in Rankin Park, life stage is based on the age of children in the household. The age of the parent(s) is not taken into account.

- **Young children:** Children aged under 15 only
- **Mixed age children:** One or more children under 15 and one or more children over 15 (must have 2 or more children)
- **Older children:** Children aged 15 and over only

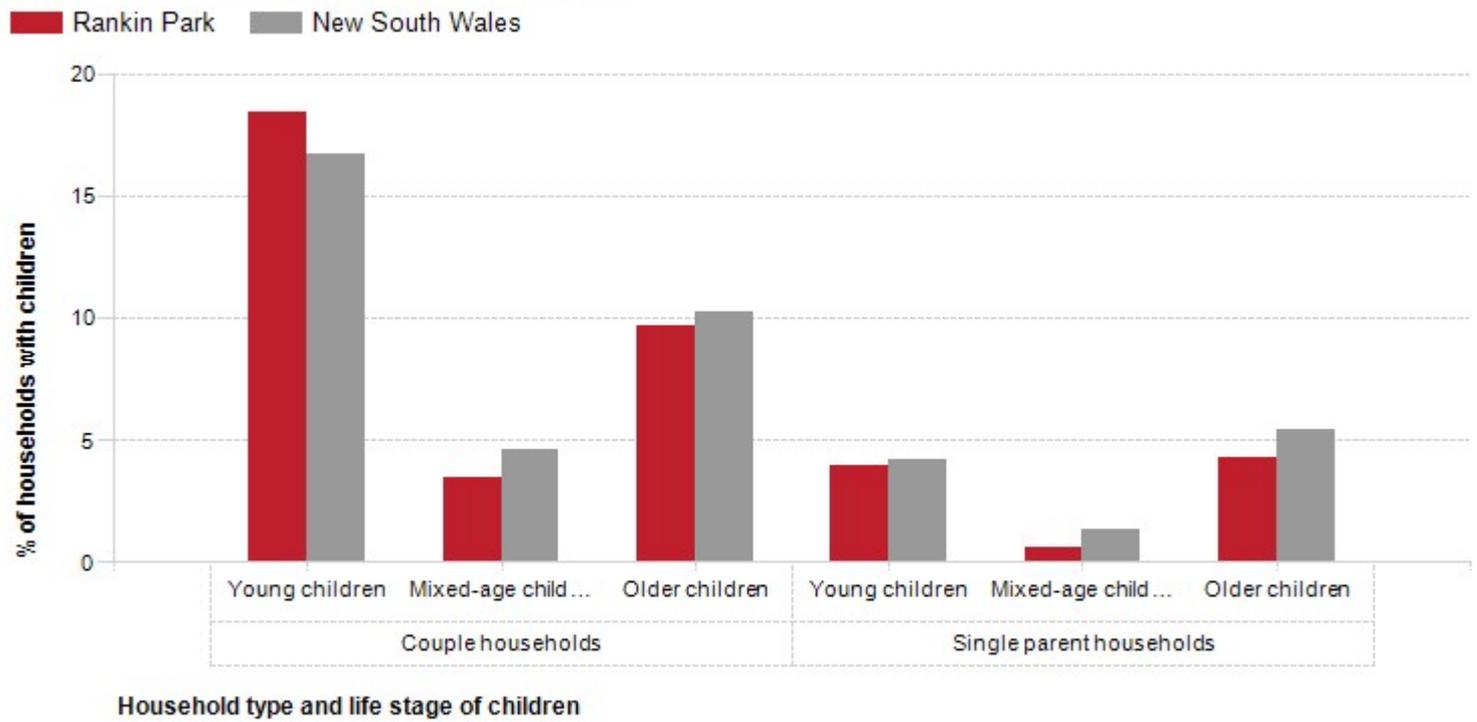

To continue building the story, Rankin Park's Household data should be viewed in conjunction with [Household Size](#), [Age Structure](#) and [Dwelling Type](#).

Households with children by life stage

Rankin Park	2011			2006			Change
Households with children	Number	%	New South Wales	Number	%	New South Wales	2006 to 2011
Couples with children	162	31.6	31.7	185	36.3	31.8	-23
▪ Couples with young children	94	18.4	16.8	95	18.7	16.7	-1

Change in households with children, 2006 to 2011

Rankin Park

Source: Australian Bureau of Statistics, Census of Population and Housing, 2006 and 2011 (Enumerated data)
 Compiled and presented in profile.id by .id, the population experts.

Dominant groups

Analysis of the families with children in Rankin Park in 2011 compared to New South Wales shows that there was a larger proportion of couples with young children, and a smaller proportion of couples with older children.

Overall, 18.4% of total households with children were couple with young children, and 9.7% were couples with older children, compared with 16.8% and 10.3% respectively for New South Wales.

There were a similar proportion of single parent households with young children and a smaller proportion of single parent households with older children. Overall, the proportion of single parent households with young children was 4.0% compared to 4.2% in New South Wales while the proportion of single parent households with older children was 4.3% compared to 5.5% in New South Wales.

Emerging groups

Between 2006 and 2011, the number of households with children decreased by 39 households or 15.8%.

There were no major differences between 2006 and 2011 in Rankin Park.

Households without children

Households without Children include couples without children and lone person households. They require different services depending on the age of the people in the households. For example young couples who have not had children (yet) compared to older "empty nester" couples whose children may have left home.

For Households without Children in Rankin Park, life stage is based on the age of the household reference person (usually person 1 on the Census form):

- **Young:** Aged 15-44
- **Middle-aged:** Aged 45-64
- **Older:** Aged 65 and over

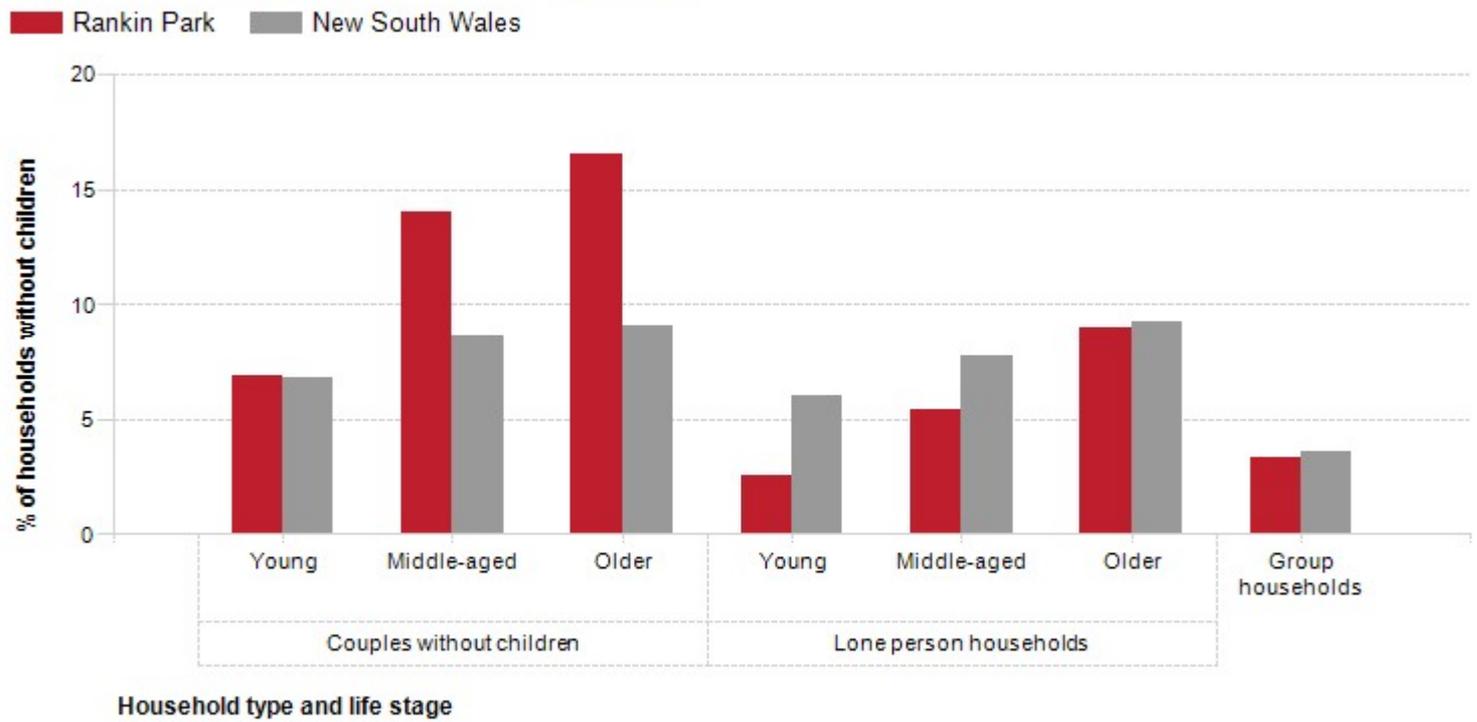

To continue building the story, Rankin Park's Household data should be viewed in conjunction with [Household Size](#), [Age Structure](#) and [Dwelling Type](#).

Households without children by life stage

Rankin Park	2011			2006			Change
Households without children	Number	%	New South Wales	Number	%	New South Wales	2006 to 2011
Couples without children	193	37.6	24.5	161	31.6	24.1	+32
▪ Young couples without children	35	6.9	6.8	25	4.9	6.7	+11

Rankin Park

Source: Australian Bureau of Statistics, Census of Population and Housing, 2006 and 2011 (Enumerated data)
 Compiled and presented in profile.id by .id, the population experts.

Dominant groups

Analysis of the households without children in Rankin Park in 2011 compared to New South Wales shows that there was a similar proportion of young couples without children, a larger proportion of middle-aged couples without children, and a larger proportion of older couples without children.

In addition, there were a smaller proportion of young lone person households, a smaller proportion of middle-aged lone person households, and a similar proportion of older lone person households.

Emerging groups

Between 2006 and 2011, the number of households without children increased by 41.

There were no major differences in Rankin Park between 2006 and 2011.

Household size

The size of households in general follows the life-cycle of families. Households are usually small at the stage of relationship formation (early marriage), and then increase in size with the advent of children. They later reduce in size again as these children reach adulthood and leave home. Household size can also be influenced by a lack (or abundance) of affordable housing. Overseas migrants and indigenous persons often have a tradition of living with extended family members which significantly affects household size.

Household size in Australia has declined since the 1970s but between 2006 and 2011, the average household size remained stable for the nation as a whole.

An increasing household size in an area may indicate a lack of affordable housing opportunities for young people, an increase in the birth rate or an increase in family formation in the area. A declining household size may indicate children leaving the area when they leave home, an increase in retirees settling in the area, or an attraction of young singles and couples to the area.

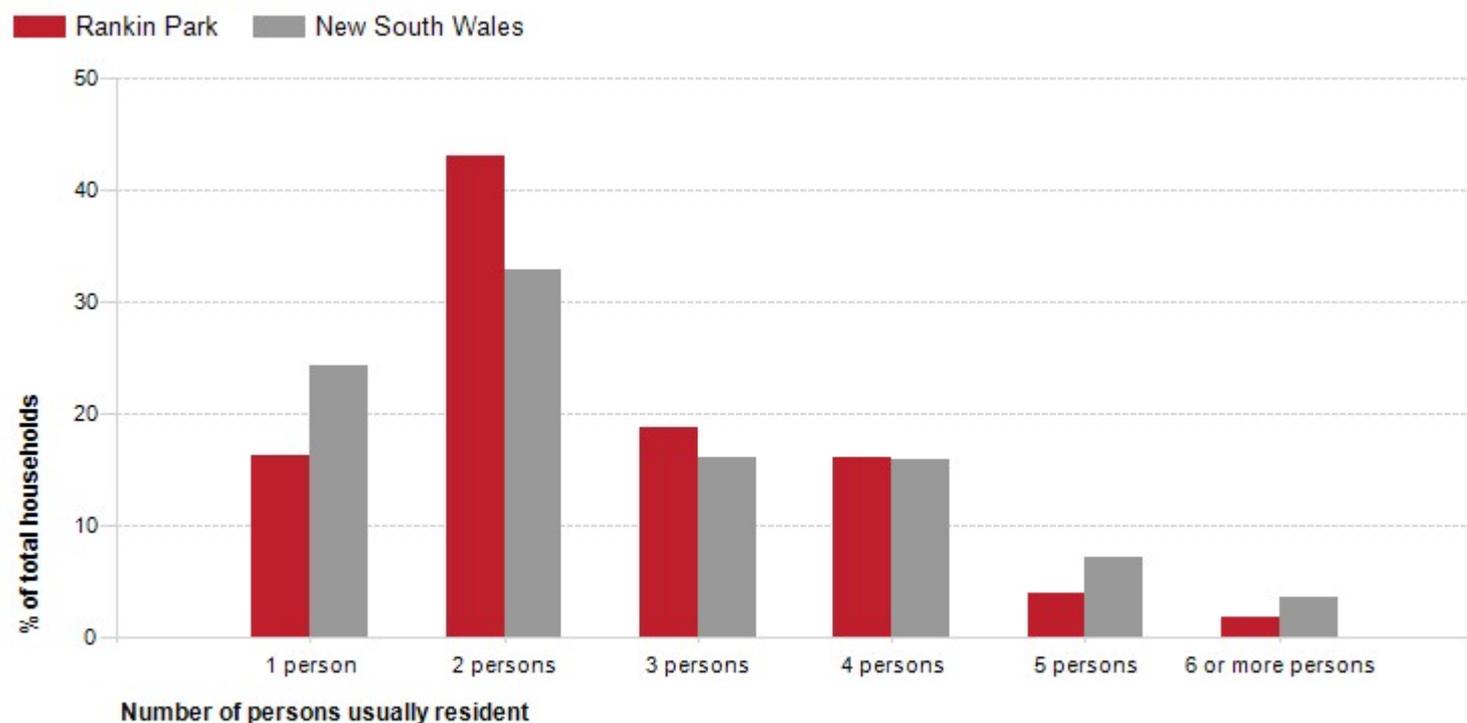

For greater insight, Rankin Park's Household Size data should be viewed in conjunction with [Household Summary](#), [Age Structure](#), [Dwelling Type](#), [Household Income](#) and [Language Spoken at Home](#).

Household size

Rankin Park	2011			2006			Change 2006 to 2011
	Number	%	New South Wales	Number	%	New South Wales	
Number of persons usually resident							
1 person	81	16.2	24.2	83	16.3	24.2	-2
2 persons	215	43.1	33.0	199	39.2	33.2	+16
3 persons	94	18.8	16.1	91	17.9	16.0	+3

Change in household size, 2006 to 2011

Rankin Park

Source: Australian Bureau of Statistics, Census of Population and Housing, 2006 and 2011 (Enumerated data)
Compiled and presented in profile.id by .id, the population experts.

Dominant groups

Analysis of the number of persons usually resident in a household in Rankin Park compared with New South Wales shows that there were a lower proportion of lone person households, and a lower proportion of larger households (those with 4 persons or more). Overall there were 16.2% of lone person households, and 21.8% of larger households, compared with 24.2% and 26.7% respectively for New South Wales.

The major differences in the household size for Rankin Park and New South Wales were:

- A *larger* percentage of households with 2 persons usually resident (43.1% compared to 33.0%)
- A *larger* percentage of households with 3 persons usually resident (18.8% compared to 16.1%)
- A *smaller* percentage of households with 1 person usually resident (16.2% compared to 24.2%)
- A *smaller* percentage of households with 5 persons usually resident (4.0% compared to 7.2%)

Emerging groups

The number of households in Rankin Park decreased by 9 between 2006 and 2011.

There were no major differences in Rankin Park between 2006 and 2011.

Dwelling type

Dwelling Type is an important determinant of Rankin Park's residential role and function. A greater concentration of higher density dwellings is likely to attract more young adults and smaller households, often renting. Larger, detached or separate dwellings are more likely to attract families and prospective families. The residential built form often reflects market opportunities or planning policy, such as building denser forms of housing around public transport nodes or employment centres.

Dwelling Type statistics should be viewed in conjunction with [Household size](#), [Household Types](#), [Housing Tenure](#) and [Age Structure](#) for a more complete picture of the housing market in Rankin Park.

Dwelling structure

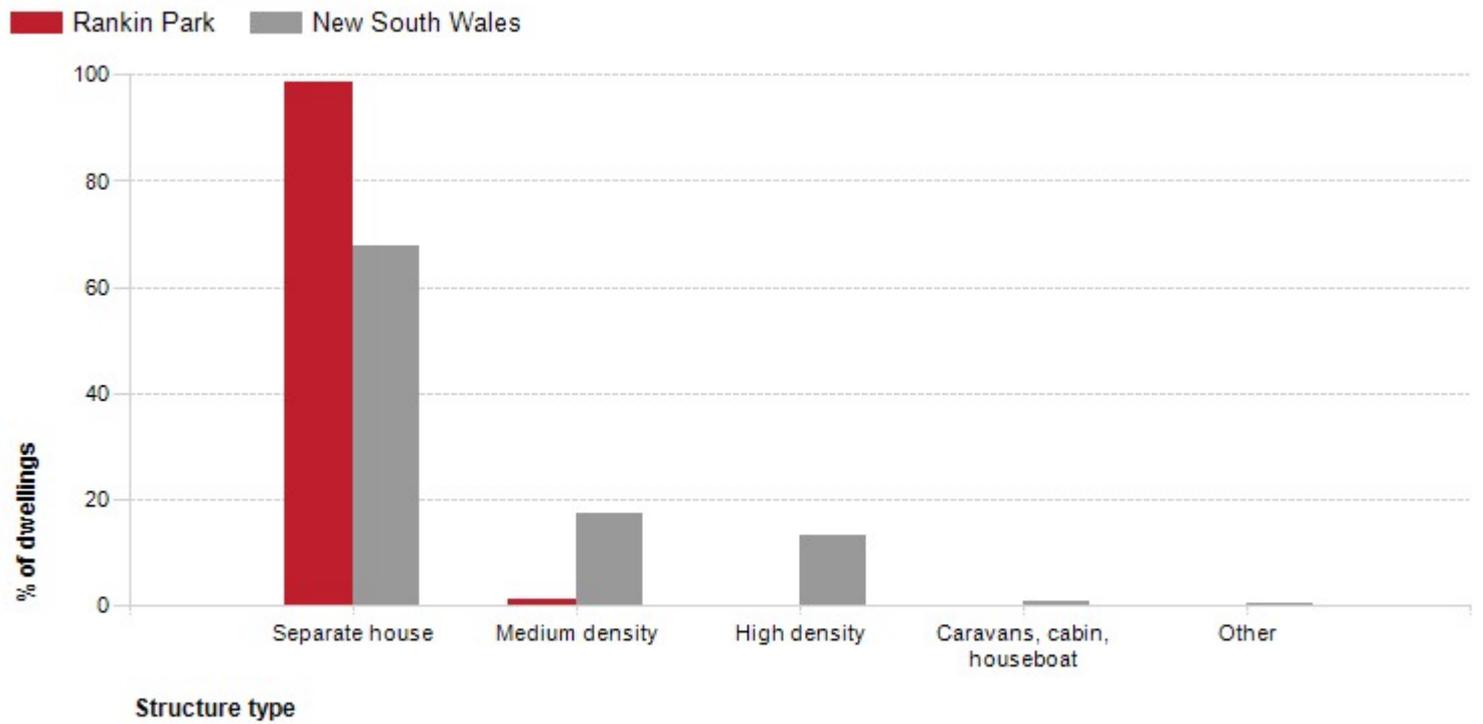

Rankin Park	2011			2006			Change
Dwelling type	Number	%	New South Wales	Number	%	New South Wales	2006 to 2011

Dominant groups

In 2011, there were 541 separate houses in the area, 7 medium density dwellings, and no high density dwellings.

Analysis of the types of dwellings in Rankin Park in 2011 shows that 98.7% of all dwellings were separate houses; 1.3% were medium density dwellings, and none% were high density dwellings, compared with 67.9%, 17.4%, and 13.3% in the New South Wales respectively.

In 2011, a total of 93.4% of the dwellings in Rankin Park were occupied on Census night, compared to 90.5% in New South Wales. The proportion of unoccupied dwellings was 6.6%, which is smaller compared to that found in New South Wales (9.2%).

Emerging groups

The total number of dwellings in Rankin Park increased by 16 between 2006 and 2011.

There were no major differences in Rankin Park between 2006 and 2011.

Number of bedrooms per dwelling

The Number of Bedrooms in a dwelling is an indicator of the size of dwellings, and when combined with dwelling type information, provides insight into the role Rankin Park plays in the housing market. For example, an area of high density dwellings that are predominantly 1-2 bedroom are likely to attract students, single workers and young couples, whereas a high density area with dwellings that are predominantly 2-3 bedroom may attract more empty nesters and some families.

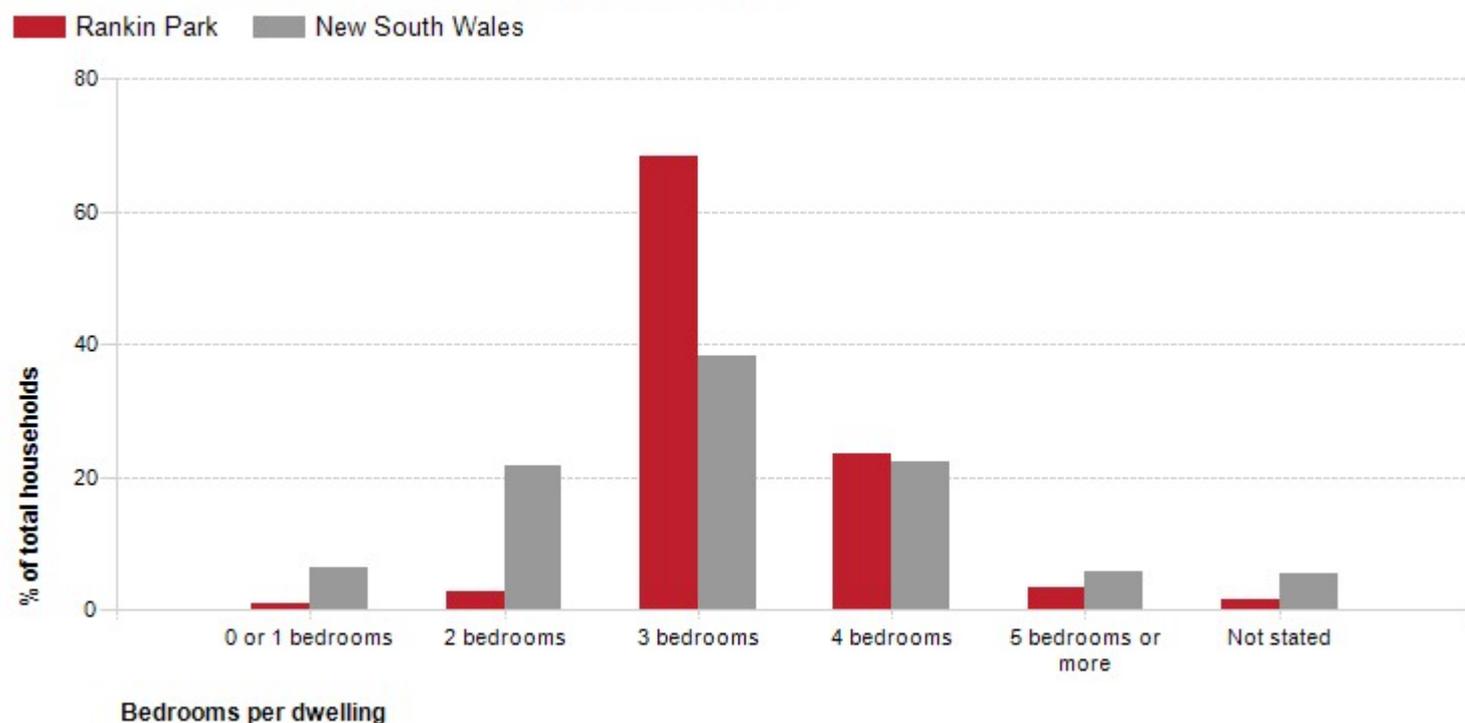

In combination with Household type and Household size, the Number of Bedrooms can also indicate issues around housing affordability, overcrowding and other socio-economic factors.

Number of bedrooms per dwelling

Rankin Park	2011			2006			Change
Number of bedrooms	Number	%	New South Wales	Number	%	New South Wales	2006 to 2011
0 or 1 bedrooms	4	0.8	6.3	7	1.4	5.9	-3
2 bedrooms	13	2.7	21.7	20	3.9	21.5	-6
3 bedrooms	348	68.3	38.3	351	68.9	39.4	-3
4 bedrooms	119	23.4	22.3	109	21.5	21.3	+10
5 bedrooms or more	16	3.3	5.8	13	2.6	5.2	+4

Rankin Park

Source: Australian Bureau of Statistics, Census of Population and Housing, 2006 and 2011 (Enumerated data)
Compiled and presented in profile.id by .id, the population experts.

Dominant groups

Analysis of the number of bedrooms in dwellings in Rankin Park in 2011 compared to New South Wales shows that there was a lower proportion of dwellings with 1 and 2 bedrooms, as well as a lower proportion of dwellings with 4 or more bedrooms.

Overall, 3.5% of households were in 1-2 bedroom dwellings, and 26.7% of 4-plus bedroom dwellings, compared with 28.0% and 28.1% for New South Wales respectively.

The major differences between the number of bedrooms per dwelling of Rankin Park and New South Wales were:

- A larger percentage of 3 bedroom dwellings (68.3% compared to 38.3%)
- A larger percentage of 4 bedroom dwellings (23.4% compared to 22.3%)
- A smaller percentage of 2 bedroom dwellings (2.7% compared to 21.7%)
- A smaller percentage of dwellings with no bedrooms (includes bedsitters) (0.8% compared to 6.3%)

Emerging groups

There were no major differences in Rankin Park between 2006 and 2011.

Internet connection

A fast Internet Connection is increasingly required for accessing essential information and undertaking domestic and non-domestic business. Households with dial-up or no internet service are being left behind in the digital divide' as both government and the private sector are increasingly conducting their business, or aspects of it, on-line.

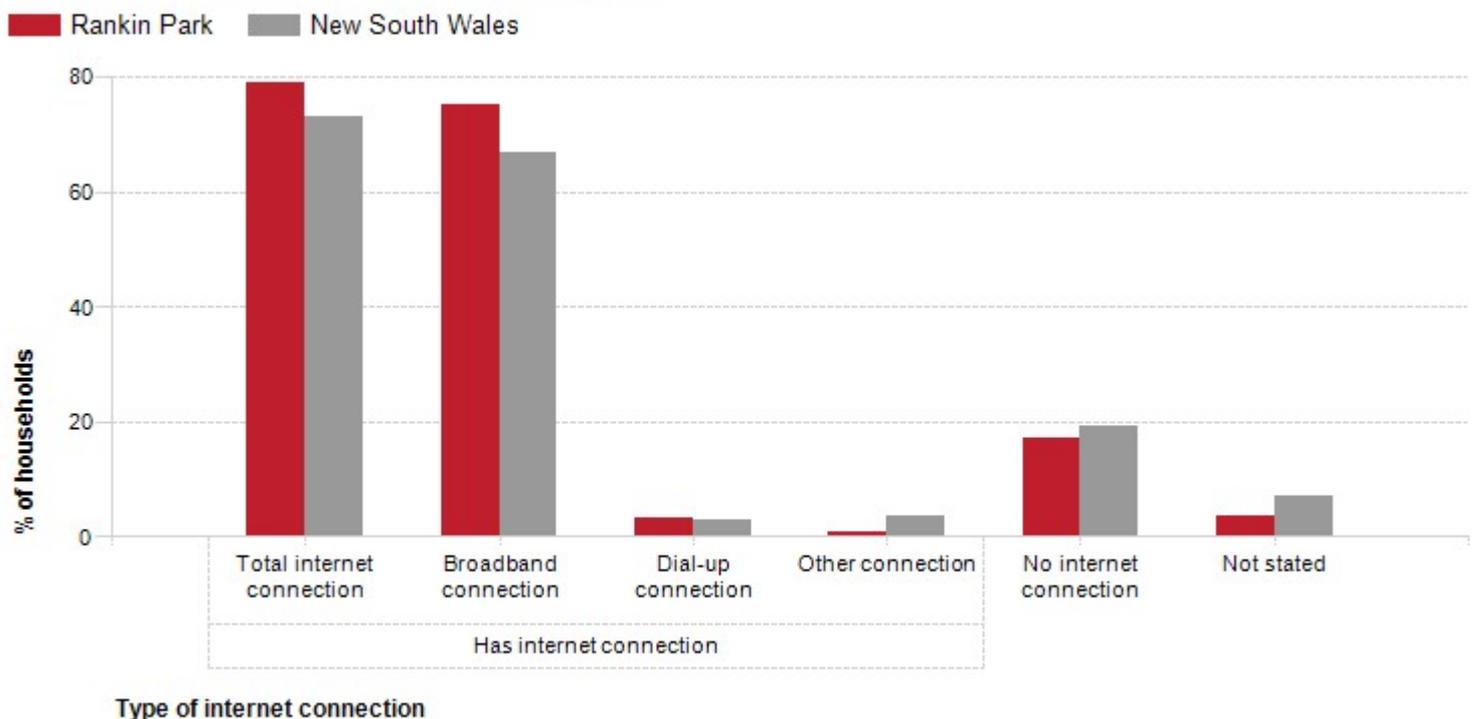

Internet connectivity in Rankin Park can be affected by availability of connection, Education, Household Income and Age Structure.

Type of internet connection

Rankin Park	2011			2006			Change
Connection type	Number	%	New South Wales	Number	%	New South Wales	2006 to 2011
Total internet connection	402	79.1	73.3	346	68.2	58.4	+56

Dominant groups

Analysis of the type of internet connection of households in Rankin Park compared to New South Wales shows that there was a lower proportion of households with either no internet connection or a dial up connection, and a higher proportion of households with broadband connectivity.

Overall 20.3% of households had no internet connection or a dial up connection, and 75.1% had broadband connectivity, compared with 22.2% and 67.0% respectively in New South Wales.

Emerging groups

Between 2006 and 2011 the number of households with an internet connection increased by 56.

The largest changes in the internet connectivity in Rankin Park, between 2006 and 2011 were:

- Broadband connection (+192 households)
- Dial-up connection (-137 households)
- No internet connection (-66 households)

Number of cars per household

The ability of the population to access services and employment is strongly influenced by access to transport. The number of motor vehicles per household in Rankin Park quantifies access to private transport and will be influenced by Age Structure and Household Type, which determine the number of adults present; access to Public Transport; distance to shops, services, employment and education; and Household Income. Depending on these factors, car ownership can be seen as a measure of advantage or disadvantage, or a neutral socio-economic measure, which impacts on the environment and quality of life.

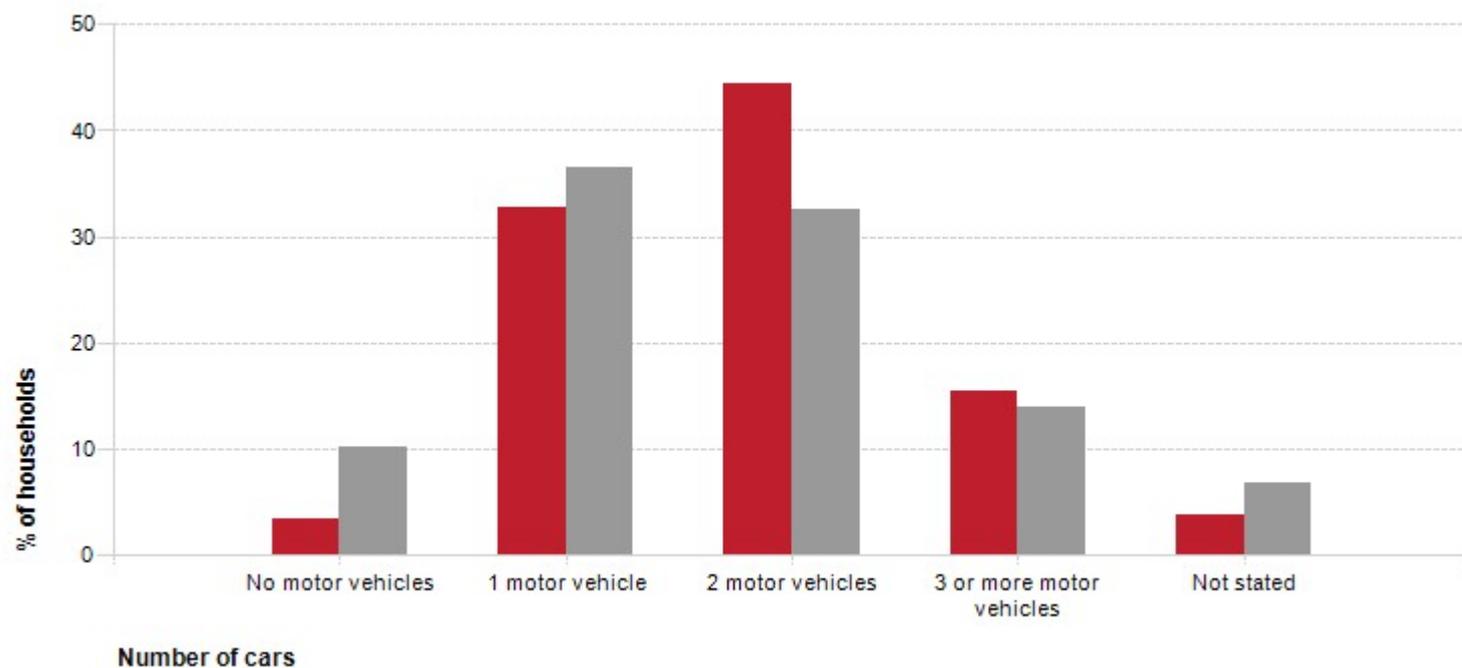

Car ownership

Rankin Park	2011			2006			Change
Number of cars	Number	%	New South Wales	Number	%	New South Wales	2006 to 2011
No motor vehicles	17	3.4	10.2	22	4.3	11.2	-5
1 motor vehicle	167	32.7	36.5	176	34.6	36.7	-9
2 motor vehicles	227	44.5	32.6	230	45.2	31.4	-3
3 or more motor vehicles	79	15.5	13.9	71	14.1	12.3	+8
Not stated	19	3.8	6.8	8	1.7	8.3	+11

Change in car ownership, 2006 to 2011

Source: Australian Bureau of Statistics, Census of Population and Housing, 2006 and 2011 (Enumerated data)
Compiled and presented in profile.id by .id, the population experts.

Dominant groups

Analysis of the car ownership of the households in Rankin Park in 2011 compared to New South Wales shows that 92.8% of the households owned at least one car, while 3.4% did not, compared with 83.0% and 10.2% respectively in New South Wales.

Of those that owned at least one vehicle, there was a smaller proportion who owned just one car; a larger proportion who owned two cars; and a larger proportion who owned three cars or more.

Overall, 32.7% of the households owned one car; 44.5% owned two cars; and 15.5% owned three cars or more, compared with 36.5%; 32.6% and 13.9% respectively for New South Wales.

Emerging groups

There were no major differences in Rankin Park between 2006 and 2011.

Housing tenure

Rankin Park's Housing Tenure data provides insights into its socio-economic status as well as the role it plays in the housing market. For example, a high concentration of private renters may indicate a transient area attractive to young singles and couples, while a concentration of home owners indicates a more settled area with mature families and empty-nester [Household Summary](#). Tenure can also reflect built form ([Dwelling Type](#)), with a significantly higher share of renters in high density housing and a substantially larger proportion of home-owners in separate houses, although this is not always the case.

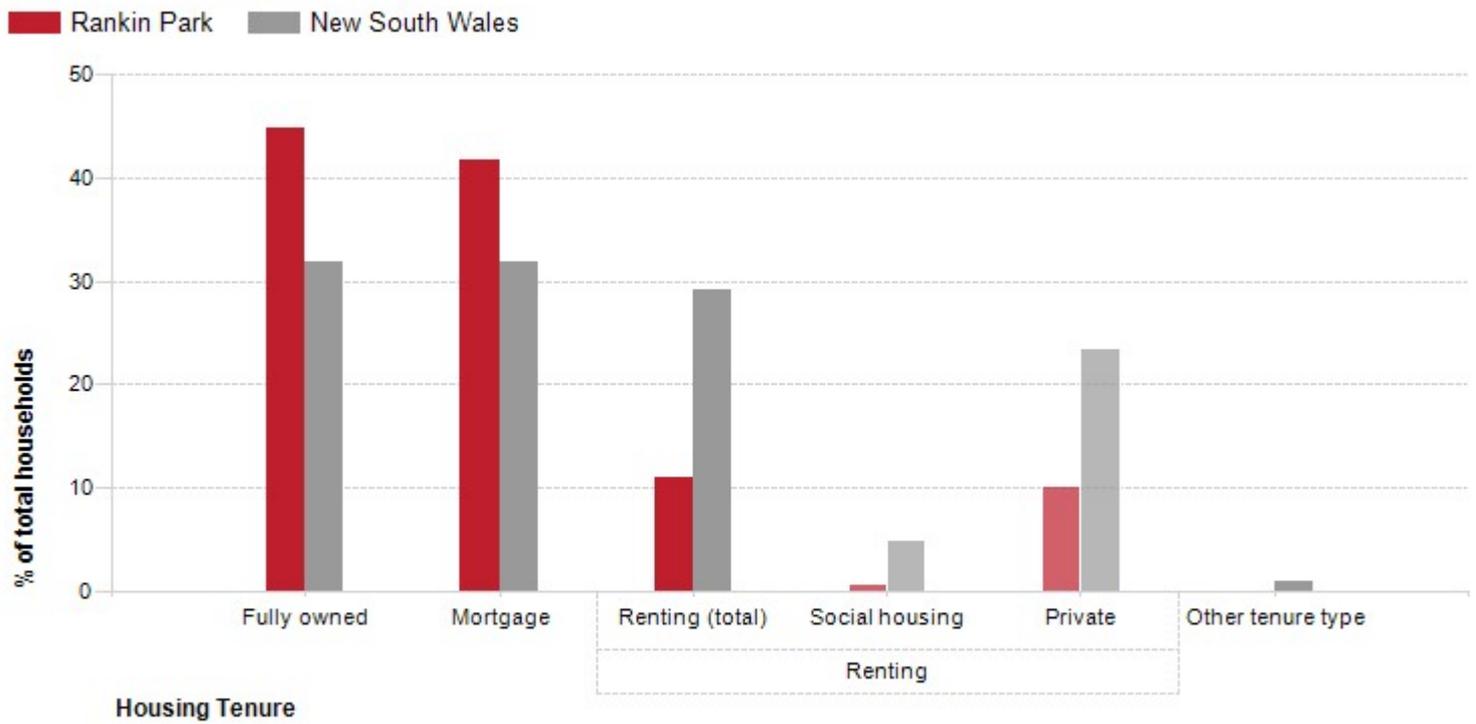

In conjunction with other socio-economic status indicators in Rankin Park, Tenure data is useful for analysing housing markets, housing affordability and identifying public housing areas.

Housing tenure

Rankin Park

Source: Australian Bureau of Statistics, Census of Population and Housing, 2006 and 2011 (Enumerated data)
 Compiled and presented in profile.id by .id, the population experts.

Dominant groups

Analysis of the housing tenure of the population of Rankin Park in 2011 compared to New South Wales shows that there was a larger proportion of households who owned their dwelling; a larger proportion purchasing their dwelling; and a smaller proportion who were renters.

Overall, 44.8% of the population owned their dwelling; 41.8% were purchasing, and 11.0% were renting, compared with 31.9%, 31.9% and 29.1% respectively for New South Wales.

Emerging groups

There were no major differences in Rankin Park between 2006 and 2011.

The total number of households in Rankin Park increased by 5 between 2006 and 2011.

Housing loan repayments

Mortgage repayments are directly related to house prices in Rankin Park, length of occupancy and the level of equity of home owners. When viewed with [Household Income](#) data it may also indicate the level of housing stress households in the community are under. In mortgage belt areas it is expected that households will be paying a higher proportion of their income on their housing compared to well-established areas. First home buyer areas are also likely to have larger mortgages than upgrader areas where households move in with equity from elsewhere.

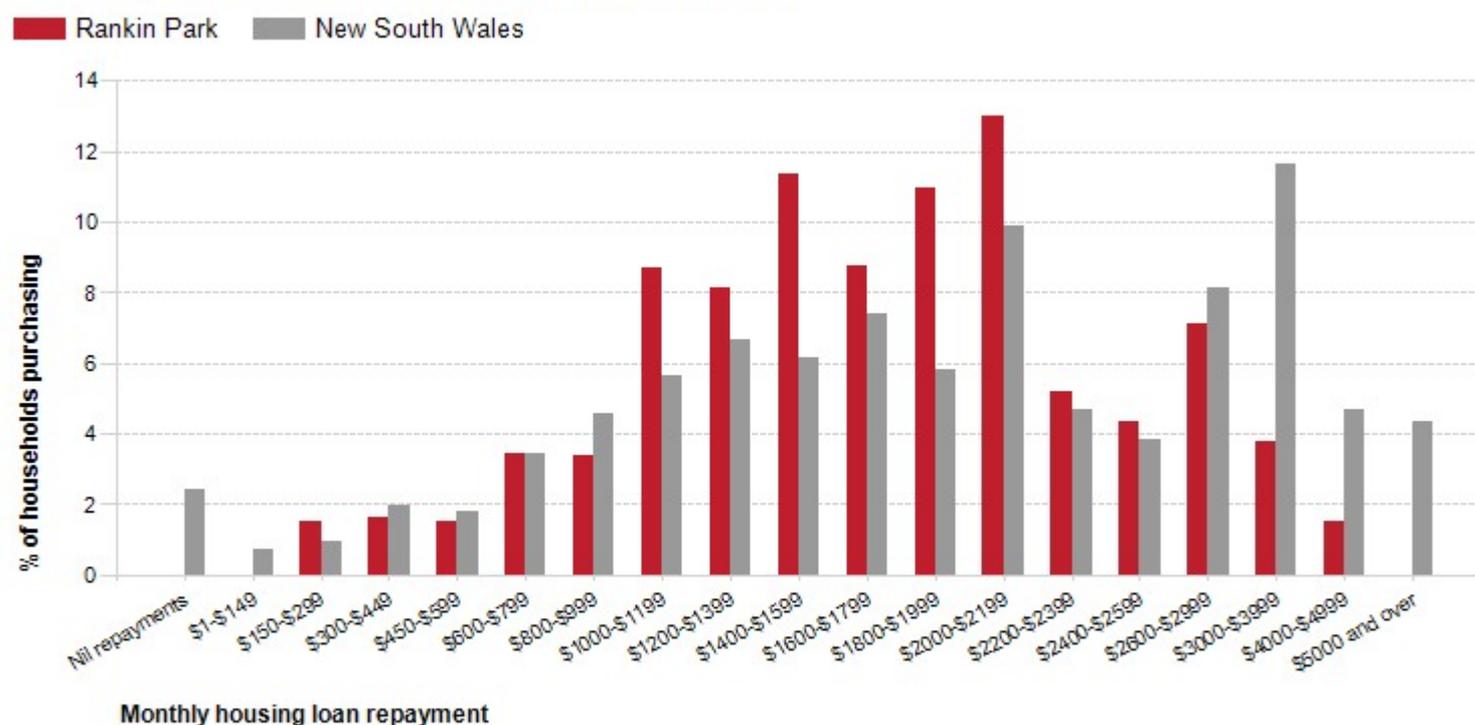

Mortgage payment levels are not directly comparable over time because of inflation. For comparison of mortgage payments over time, go to [Housing Loan Quartiles](#).

Monthly housing loan repayments

Monthly housing loan repayments, 2011

Source: Australian Bureau of Statistics, Census of Population and Housing, 2011 (Enumerated data)
Compiled and presented in profile.id by .id, the population experts.

Dominant groups

Analysis of the monthly housing loan repayments of households in Rankin Park compared to New South Wales shows that there was a smaller proportion of households paying high mortgage repayments (\$2,600 per month or more), as well as a smaller proportion of households with low mortgage repayments (less than \$1000 per month).

Overall, 12.4% of households were paying high mortgage repayments, and 11.7% were paying low repayments, compared with 28.8% and 15.8% respectively in New South Wales.

The major differences between the household loan repayments of Rankin Park and New South Wales were:

- A larger percentage of \$1400-\$1599 (11.4% compared to 6.2%)
- A larger percentage of \$1800-\$1999 (10.9% compared to 5.8%)
- A larger percentage of \$2000-\$2199 (13.0% compared to 9.9%)
- A larger percentage of \$1000-\$1199 (8.7% compared to 5.6%)

Housing loan quartiles

Mortgage repayments in Rankin Park are directly related to house prices, length of occupancy and the level of equity of home owners. When viewed with [Household Income](#) data it may also indicate the level of housing stress in the community.

The quartile method is the most objective method of comparing change in the mortgage payment profile of a community over time.

A detailed explanation of how Housing Loan Repayment quartiles are calculated and interpreted is available in [specific data notes](#).

Dominant groups

Housing loan repayment quartiles allow us to compare relative repayment liabilities across time. Analysis of the distribution of households by housing loan repayment quartiles in Rankin Park compared to New South Wales shows that there was a smaller proportion of households in the highest repayment quartile, as well as a smaller proportion in the lowest repayment quartile.

Emerging groups

The total number of households with a mortgage in Rankin Park increased by 22 between 2006 and 2011. The most significant change in Rankin Park during this period was in the medium lowest quartile which showed an increase of 19 households.

Housing rental payments

Rental payments can be a better measure of the cost of housing in Rankin Park than mortgage repayments because they are not contingent on length of occupancy or equity in the dwelling.

High rental payments may indicate desirable areas with mobile populations who prefer to rent, or a housing shortage, or gentrification. Low rental payments may indicate public housing (check [Tenure Type](#)), or areas where low income households move by necessity for a lower cost of living.

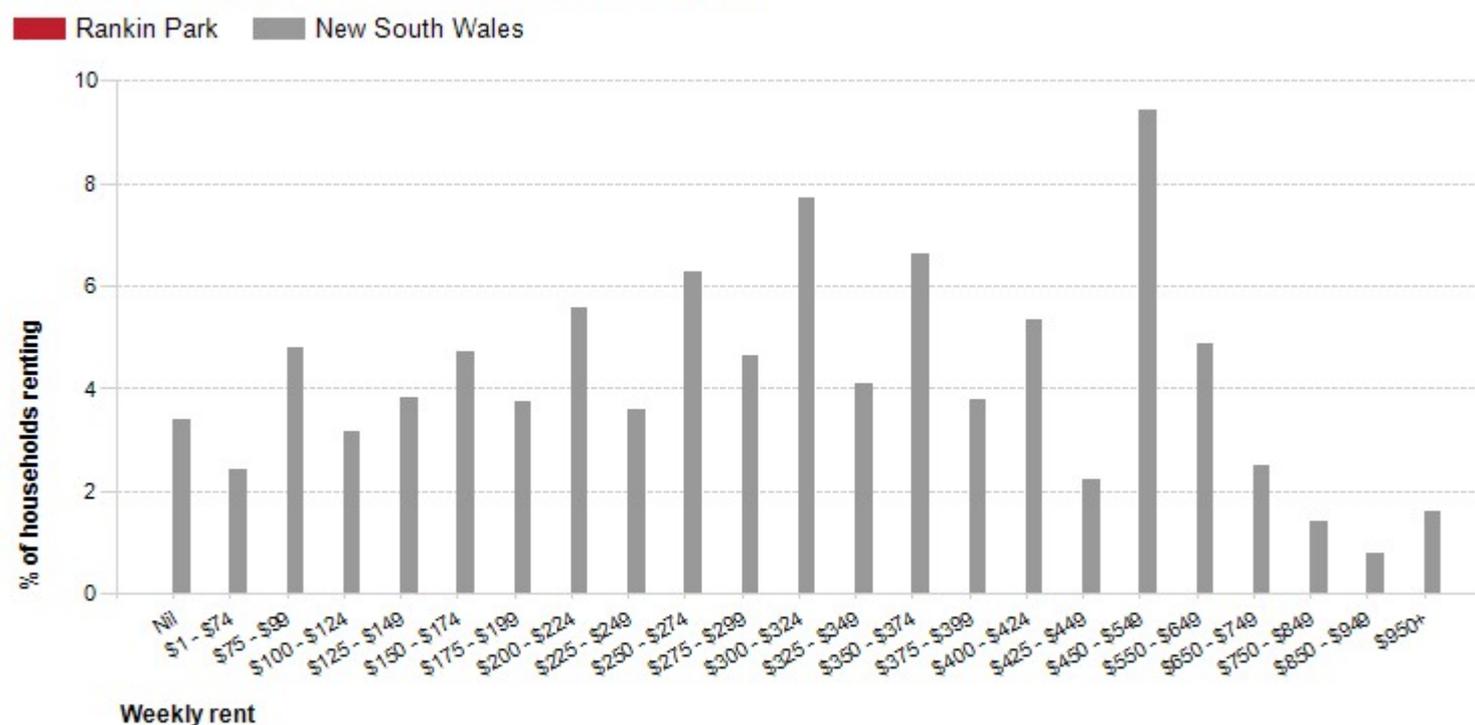

Rental payments are not directly comparable over time because of inflation. For comparison of rental payments over time, go to [Housing Rental Quartiles](#).

Weekly housing rental payments

Weekly housing rental payments, 2011

Source: Australian Bureau of Statistics, Census of Population and Housing, 2011 (Enumerated data)
 Compiled and presented in profile.id by .id, the population experts.

Dominant groups

Analysis of the weekly housing rental payments of households in Rankin Park compared to New South Wales shows that there was a smaller proportion of households paying high rental payments (\$400 per week or more), as well as a smaller proportion of households with low rental payments (less than \$150 per week).

Overall, 14.6% of households were paying high rental payments, and 5.6% were paying low payments, compared with 28.1% and 17.6% respectively in New South Wales.

The major differences between the housing rental payments of Rankin Park and New South Wales were:

- A larger percentage of \$325 - \$349 (12.5% compared to 4.1%)
- A larger percentage of \$400 - \$424 (13.2% compared to 5.3%)
- A larger percentage of \$375 - \$399 (8.7% compared to 3.8%)
- A larger percentage of \$350 - \$374 (10.8% compared to 6.6%)

Housing rental quartiles

Rental payments in Rankin Park are indicative of its residential role and function and are directly related to the value of residential property. When viewed with [Household Income](#) data they may also indicate the level of 'housing stress' in the community.

The quartile method is the most objective method of comparing change in the rental costs of a community over time.

A detailed explanation of how Housing Rental Payment quartiles are calculated and interpreted is available in [specific data notes](#).

Rankin Park

Source: Australian Bureau of Statistics, Census of Population and Housing, 2006 and 2011 (Enumerated data)
Compiled and presented in profile.id by .id, the population experts.

Dominant groups

Rental payment quartiles allow us to compare relative rental liabilities across time. Analysis of the distribution of households by rental payment quartiles in Rankin Park compared to New South Wales shows that there was a smaller proportion of households in the highest payment quartile, as well as a smaller proportion in the lowest payment quartile.

Emerging groups

The total number of households renting their dwelling in Rankin Park decreased by 11 between 2006 and 2011. The most significant change during this period was in the highest quartile which showed a slight decrease of -13 households.

Migration summary

Migration, or residential mobility, together with births and deaths are significant components of population change in Australia. The movement of people into, and out of an area directly influences the characteristics of the population and the demand for services and facilities. Migration is the most volatile component of population change and can be affected by changing housing and economic opportunities such as housing affordability issues or the mining boom.

There are three main types of migration in Australia, overseas migration, between-state migration, and within-state migration. By far the most common form of migration is within-state, and largely involves moves between neighbouring and existing urban areas where moves are often short.

Looking at the level and type of migration in the City of Newcastle can indicate whether the population is sedentary and likely to be in the area for a long time (and perhaps have significant ties to the community), or transient, and likely to move on. Related topics which can be viewed to get a clearer picture of population mobility include [Age Structure](#) and [Housing Tenure](#).

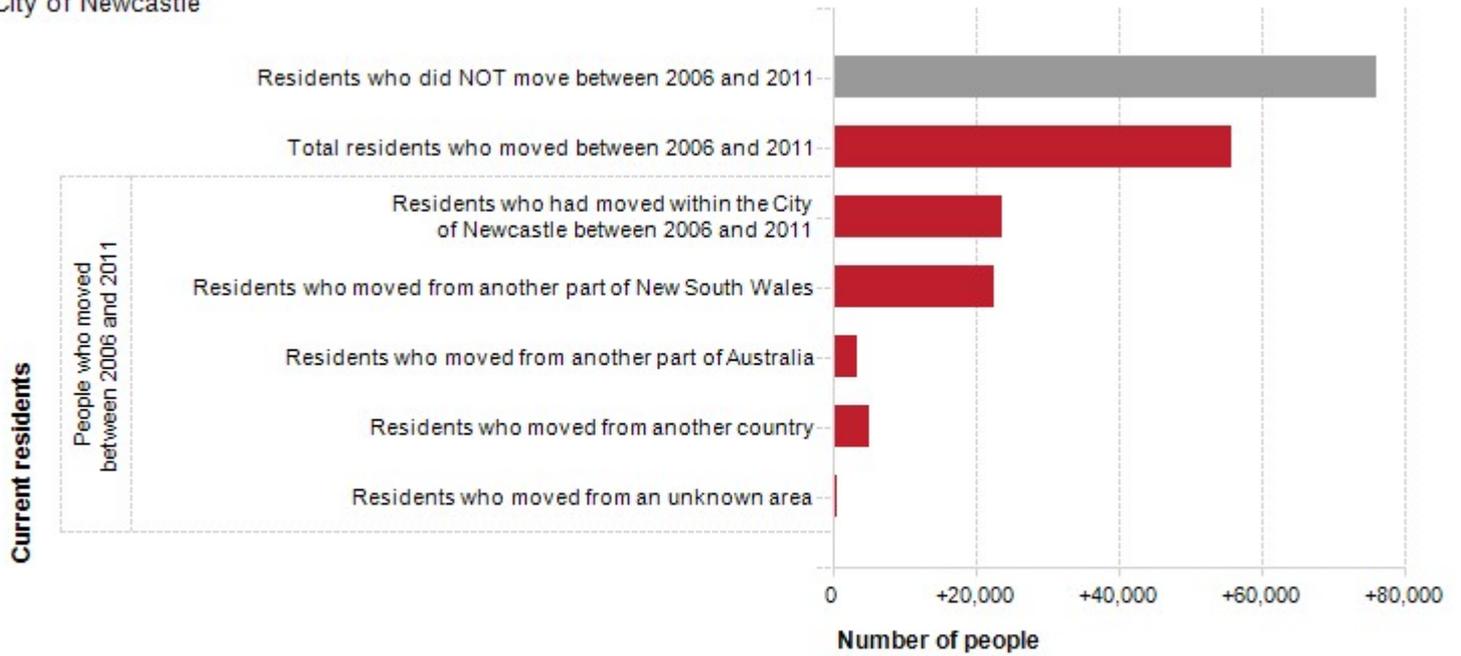

Previous residential location of current residents in 2011

City of Newcastle		
	Number	Percentage

Previous residential location of current residents in 2011

City of Newcastle

Source: Australian Bureau of Statistics, Census of Population and Housing, 2011 (Usual residence data)
Compiled and presented by in profile.id by .id, the population experts.

For comparison, across Australia in 2011, 51.2% of residents did not move in 5 years, 36.6% moved, while 6.6% were aged under 5, and 5.6% did not state their movement.

Migration by location

Understanding where the City of Newcastle's current residents have moved from helps in predicting future mobility patterns and demographic change. Understanding where the City of Newcastle's residents are moving to indicates areas of population growth and informs possible strategies to retain and attract residents.

Generally, areas of new housing growth attract residents from established areas, especially young couples and families. Coastal communities attract retirees and people seeking a lifestyle change, while inner city areas and areas near universities attract young adults. These are broad demographic trends, while local demographic factors also have a major impact on population movement.

The City of Newcastle's migration data below provides a summary of where current residents lived five years prior to the last Census. The top ten local government areas of population movement are ranked, based on net change - that is, the difference between those who moved in and those who moved out. The areas with the greatest net change (gain or loss) to a particular area may not necessarily be those with the greatest population exchange.

Migration into and out of the area, 2006 to 2011

Migration by age

The age structure of people who move into and out of the City of Newcastle is strongly influenced by the residential role and function of the area and can influence demand for particular services. For instance, inner city areas near employment, education and entertainment tend to attract many young people in their late teens and early twenties, who move out in their late twenties and thirties to start families in suburban areas. Rural areas tend to lose young people and gain older families and retirees.

Understanding the City of Newcastle's attraction to different age groups helps to plan services for the community as well as advocating with other levels of government and private enterprise to provide infrastructure, employment opportunities and facilities which may help to retain age groups which are otherwise leaving the area.

Estimated Resident Population (ERP)

The Estimated Resident Population is the OFFICIAL City of Newcastle population for 2012.

Populations are counted and estimated in various ways. The most comprehensive population count available in Australia is derived from the Census of Population and Housing conducted by the Australian Bureau of Statistics every five years. However the Census count is NOT the official population of the City of Newcastle. To provide a more accurate population figure which is updated more frequently than every five years, the Australian Bureau of Statistics also produces "Estimated Resident Population" (ERP) numbers for the City of Newcastle.

See [data notes](#) for a detailed explanation of different population types, how they are calculated and when to use each one.

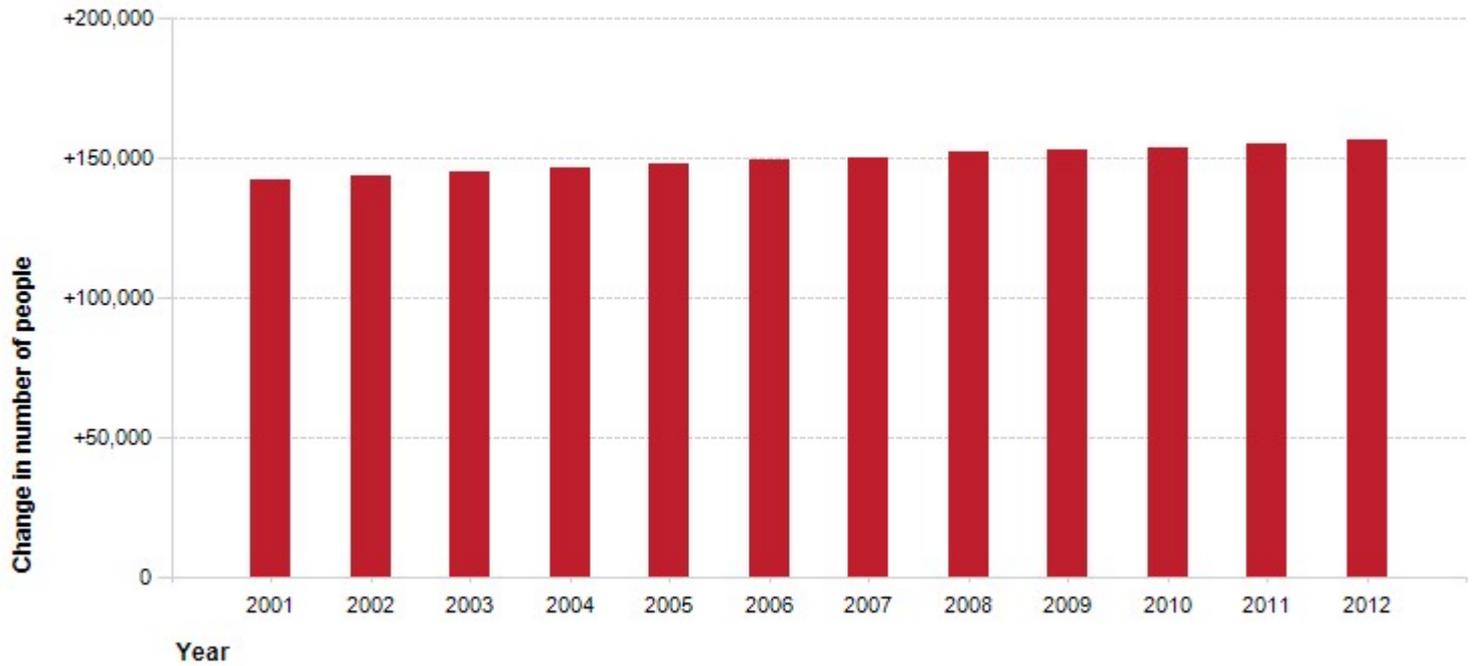

Estimated Resident Population (ERP)

City of Newcastle			
Year (ending June 30)	Number	Change in number	Change in percent
2001	142,101	--	--
2002	143,394	+1,293	+0.91

Residential building approvals

The City of Newcastle's building approvals are used as a leading indicator of the general level of residential development, economic activity, employment and investment. Residential building activity depends on many factors that vary with the state of the economy including interest rates, availability of mortgage funds, government spending, and business investment. Large financial changes or shocks, such as the Global Financial Crisis of 2008/09 can be observed in the data. However, the number of building approvals can fluctuate substantially from year to year simply as a result of the short-term nature of many construction projects, and the cyclical nature of the industry.

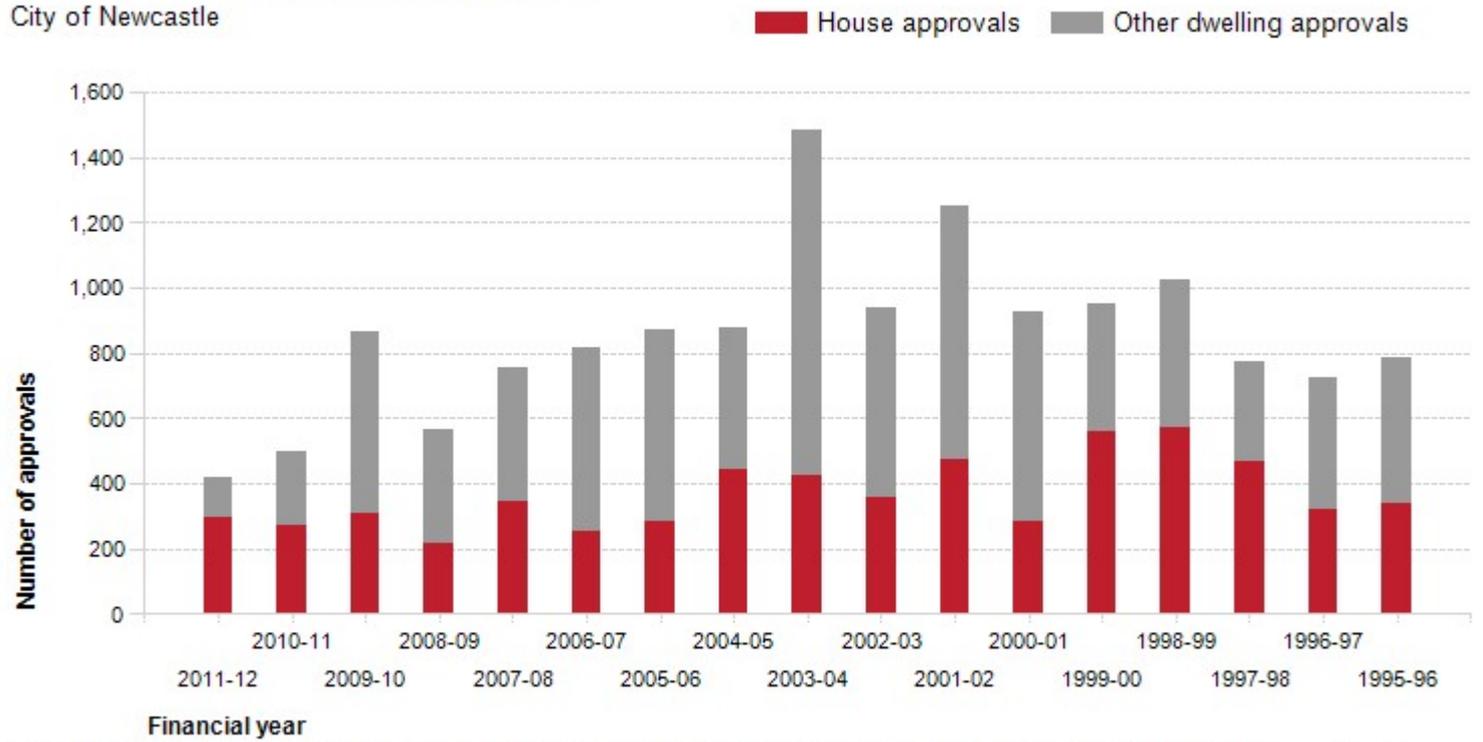

Residential building approvals

City of Newcastle	Number			Annual change			
	Year (ending June 30)	Houses	Other	Total	Houses	Other	Total

Workers' place of residence

Where does the City of Newcastle's workforce come from? Journey to Work data sheds light on how many workers live locally, how many commute from other areas and which areas they commute from. Some areas attract a large external workforce because they have major employment centres or because local residents have a different set of skills or aspirations than the local jobs require. Understanding where workers reside assists in planning and advocacy for roads and public transport provision. It also helps to clarify economic and employment drivers across areas and assists in understanding the degree to which the City of Newcastle provides local employment.

Residents' place of work

Where do the City of Newcastle's residents go to work? Journey to Work data shows how many residents work locally, and how many commute out of the area and where they commute to. Some areas consist mainly of dormitory' suburbs and the majority of the residents commute out to work. Other areas have large employment centres which attract a local workforce. Understanding where the City of Newcastle's residents go to work assists in planning and advocacy for roads and public transport provision. It also helps to clarify the economic and employment drivers across areas and assists in understanding the degree of employment self-containment within the City of Newcastle.

SEIFA - disadvantage

The City of Newcastle SEIFA Index of Disadvantage measures the relative level of socio-economic disadvantage based on a range of Census characteristics. It is a good place to start to get a general view of the relative level of disadvantage in one area compared to others and is used to advocate for an area based on its level of disadvantage.

The index is derived from attributes that reflect disadvantage such as low income, low educational attainment, high unemployment, and jobs in relatively unskilled occupations. When targeting services to disadvantaged communities, it is important to also look at these underlying characteristics as they can differ markedly between areas with similar SEIFA scores and shed light on the type of disadvantage being experienced.

A higher score on the index means a *lower* level of disadvantage. A lower score on the index means a *higher* level of disadvantage.

SEIFA by Local Government Area

SEIFA by small areas

Index of relative socio-economic disadvantage
